COURT HOUSE SQUARE, CLINTON, IOWA

Dear Fellow Gardeners:

Now is the time when most of us are thinking of our gardens and the first step in our plans is to decide what flowers and vegetables we want to grow. You will find in this catalog the finest selection of both seeds and bulbs. Every variety that we consider worth growing in your garden is listed here.

For 73 years Burpees have been working to improve the old favorites and to create new varieties of superior merit for you.

Many of our developments in flowers and vegetables have become world famous. Such well-known varieties as Fordhook Bush Lima, Iceberg Lettuce, Golden Bantam Sweet Corn, Golden Self Blanching Celery and Copenhagen Market Cabbage were first introduced in America by my father many years ago.

In recent years, the new vegetables we have created on Fordhook Farms include the Burpee Hybrid Cucumber and the Hybrid Tomatoes. These already have become popular in all parts of the country because they are so good and with their hybrid vigor outyield ordinary varieties in both quality and quantity.

Burpee's new and better flowers created on Floradale Farms are known to almost every gardener. They include some of the greatest improvements in Asters, Marigolds, Petunias, Snapdragons, Sweet Peas, Zinnias and many others.

It always has been our constant purpose to supply gardeners everywhere with the Best Seeds that Grow. That we have done this is one reason why the Burpee business has grown from its small beginning in 1876 until now it is the largest mail order seed business in the entire world.

We appreciate the confidence that gardeners all over the world have placed in us for so long a time, and we especially want to thank you for recommending Burpee's Seeds to other gardeners.

Whether you garden for pleasure or for profit, we hope that we may have the privilege of supplying you with the Best Seeds that Grow for 1949.

May we have your order as early as it is convenient for you to send it.

With best wishes for a most successful garden.

Faithfully yours,

David Burpee

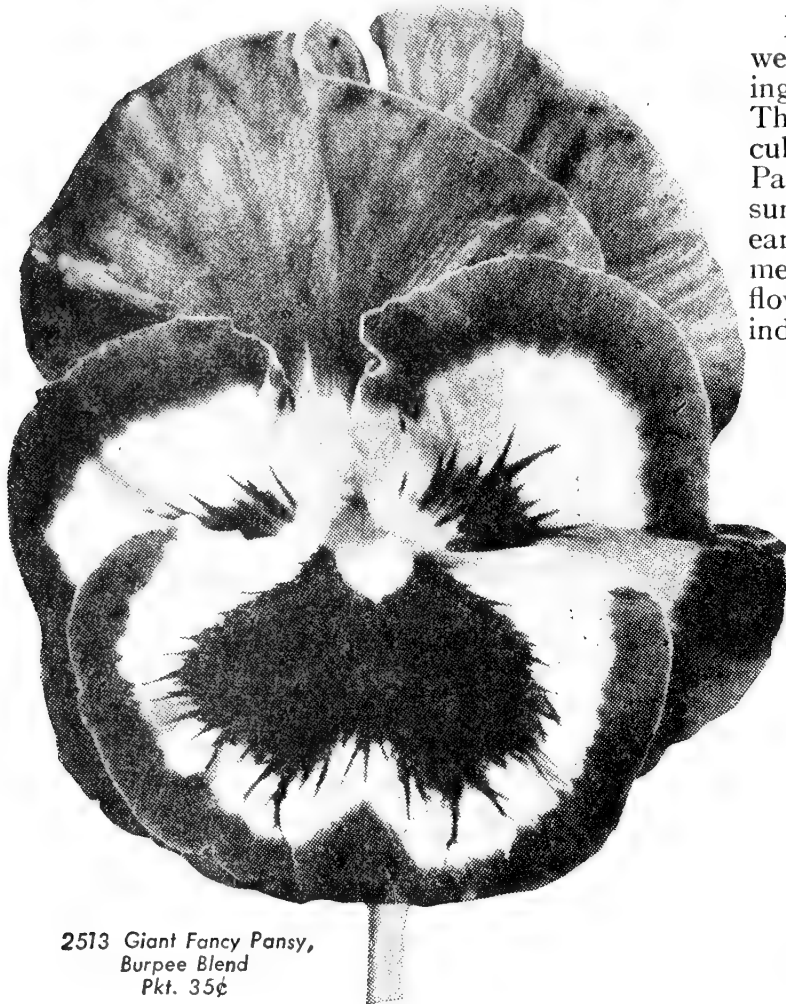

President

BURPEE GUARANTEE We guarantee the vitality and purity of Burpee's Seeds and Bulbs to the full amount of the purchase price. You can have your money back any time within a year if you are not satisfied with the results. Even with the highest quality seeds and bulbs, success in gardening depends largely upon cultivation, soil, and weather conditions. Therefore, in no case shall W. Atlee Burpee Co. be liable for more than the amount actually paid us for seeds or bulbs.

Burpee's GIANT PANSIES

Pansies always have been a great specialty with us and we are justly proud of our strains. The most careful breeding and selection assure you of the very highest quality. Their wide range of colors, markings and forms, their easy culture, have made Burpee pansies universally popular. Pansies succeed best in fairly rich, well-drained soil in a sunny position, and produce their finest flowers in the cool, early days of spring. Keep flowers picked during the summer, plants pinched back, and you will get a nice lot of flowers again in the fall. For earliest blooms, start seed indoors four to six weeks before your outdoor planting time.

Luther Burbank Zinnias

Illustrated in color on inside front cover.

2910 Luther Burbank Zinnias are a rare blend of lovely, delicate pastel or art shades comprised of many self colors ranging from cream and primrose through delicate buff-yellow, canary yellow, ivory, soft salmon, warm rose, chamois, apricot, peach, blush pink, salmon-pink to clear, bright rose. There are also unusual two- and three-color combinations of soft and light shades in some of the individual blooms. When an occasional pale lavender or light orange appears, it is always a tone that blends harmoniously with the others.

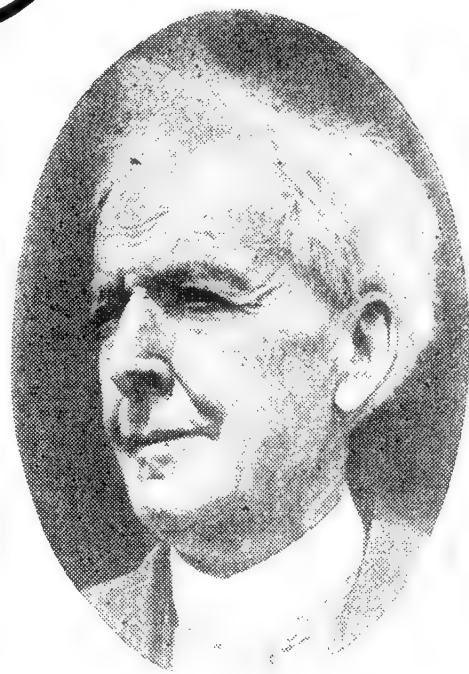

Flowers grow 5 to 5½ in. across and are composed of numerous petals which curl back somewhat to form thick flower heads 2 to 3 in. deep. Individual petals turn under at the end, giving them an unusual effect, thus adding charm and interest. Plants are strong growing, 3 to 4 ft. tall, well-branched so that an abundance of long-stemmed flowers is assured for cutting.

Vigorous plant growth, profuse blooming, large flowers, and a well-balanced range of pastel colors combine to make the Luther Burbank Zinnias a novelty worthy of the tribute to the plantsman for whom they were named.

Luther Burbank was born on a small farm in Massachusetts in 1849. At the age of 26, he moved to Santa Rosa, California, where he collected various types or species of plants from all over the world. Through hybridizing and selection, he created a multitude of new varieties; in fact, he was the greatest creator of new varieties of plants up until the time of his death in 1926.

It was David Burpee's privilege to continue with Luther Burbank's unfinished work with vegetables and flowers. As a result, David Burpee perfected these great new zinnias and named them in honor of his famous cousin and old friend, Luther Burbank, whose 100th Anniversary will be observed this year. Be sure that your garden contains these Centennial Zinnias.

The plant wizard of the world, in whose honor this new, delightful blend of giant zinnias is named. These zinnias are the direct result of the hybridizing done by Luther Burbank about a quarter of a century ago. Years of constant selection by David Burpee has brought them to their present high state of perfection.

BURPEE'S *Super Giant* ZINNIAS

3175 Burpee's Super Giants are truly giant, $5\frac{1}{2}$ to $6\frac{1}{2}$ in. across, in a full range of all colors found in zinnias including some of the loveliest colors and combinations of colors ever seen in this flower. Rare and unusual shades of cream, buff, apricot, salmon, rose and orange predominate, with a few yellows and whites; scarlet and crimson are not prominent, though there are some very attractive flowers in these colors. One is impressed by the many two-tone and three-tone color effects seen in some of the blooms. Diversity of petal and flower form, together with a most amazing assortment of solid colors and color combinations, makes Burpee's Super Giants a most delightful blend of zinnias for garden and cutting. 3 ft.

BURPEE'S GIANT *Dahlia Flowered* ZINNIAS

Zinnias, especially Dahlia Flowered, are highly prized for garden display and cutting

Dahlia flowered zinnias are outstanding both for the exquisite form of their long-stemmed flowers, which resemble giant dahlias, and for the lovely shades included in their range of color. The individual blooms grow about 5 in. across and 2 in. and more in depth. The well-branched sturdy plants grow 3 ft. high and bloom most profusely. Showy in the garden; wonderful for cutting as flowers have remarkable keeping qualities.

2899 Burpee's Fancy Tints Tremendous flowers that grow larger than any other dahlia flowered zinnia. We have selected seed from the choicest specimens, every one of which was more than 5 in. across and about 4 in. deep. The combination of colors is most strange; they shade from old rose on the outer petals through gold to a halo of bright cerise in the center. Plants are base branching, with stems growing 2 to 2½ ft. long. Wonderful for exhibition purposes; outstanding in the garden and valuable for cutting.

2901 Canary Bird A most pleasing shade of primrose-yellow which combines well with the deep shades of Dream or Royal Purple.

2894 Dream An unusual tone of deep lavender turning to mal-low-purple as the flowers age, a rather rare shade in zinnias.

2896 Exquisite Light rose with deeper rose center, creating a most pleasing two-toned color effect which is lovely for cutting.

2888 Golden Dawn Appealing golden yellow—almost a light orange shade with a reddish center. Rich and colorful combination.

2891 Illumination Enormous flowers of deep tyrian rose—a beauty, whether in the garden or as cut flowers.

2897 Oriole Attractive two-toned flowers—golden orange outer petals in contrast to a reddish orange center. Pretty blending.

2900 Polar Bear The best of all white zinnias; flowers are borne on long stems. Nice alone or a good mixer with the others.

2914 Royal Purple Distinct color in this class—a deep, rich royal purple without any hint of blue. All-America Winner.

2904 Scarlet Flame Bright scarlet nicely blended with orange. A vivid color and one that is in demand for cutting.

2882 Will Rogers Most brilliant scarlet-red shade of dazzling beauty. Striking, long-stemmed flowers of great appeal.

Burpee's Tall Double Annual LARKSPURS

2267 Burpee Wonder Larkspur, White Pkt. 25¢

One of the most beautiful and desirable flowers for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is pretty when plants are not yet in bloom. The culture of annual larkspur is quite easy. Plants do best in a sunny position in rich, well-drained garden soil free from fresh manure. They like cool weather in which to germinate and to grow best. We offer your choice of four distinct types.

Perennial Larkspurs, see Delphinium, page 51.

Burpee Wonder—Erect, "unusually long spikes

The distinctive feature of these new annual larkspurs is their habit of growth. Strong, upright spikes are produced from the base, presenting a solid, erect, column-like appearance, the upper one-third being covered with large double flowers, 1½ in. across. These extremely long-stemmed larkspurs are especially desirable for all cut-flower purposes and a row of them in the garden is most striking. They grow about 3½ ft. tall and stand heat remarkably well. We offer three splendid colors.

- 2125 **Dark Blue** Deep rich velvety blue. 2267 **White** Well-formed, glistening
2134 **Salmon** Exquisite salmon-rose. white flowers of wonderful purity.

Burpee's *New* Giant SKYSCRAPER SNAPDRAGONS

Burpee's New Giant Skyscraper Snapdragons were created on Floradale Farms after eight years of breeding, selection and reselection to produce a race of antirrhinums that would far surpass all others in height, and would also have more flowers per stem, the stems more upright, more rigid and the blooms of the most pleasing shades.

Burpee's Giant Skyscrapers are the tallest growing of all snapdragons. Plants are base branching, with from 3 to 7 strong stems arising from the main stem close to the ground. The central spike grows 3 ft. and more tall followed by the lateral stems of the same or nearly the same height.

Giant Skyscraper Snapdragon spikes are very symmetrical, half or more than half the height of the entire plant is covered with flowers and buds. Each flower is large, held upright and away from the main stem to give a graceful and airy appearance. Though covered with a profusion of bloom, spikes are not coarse or weighty but most refined.

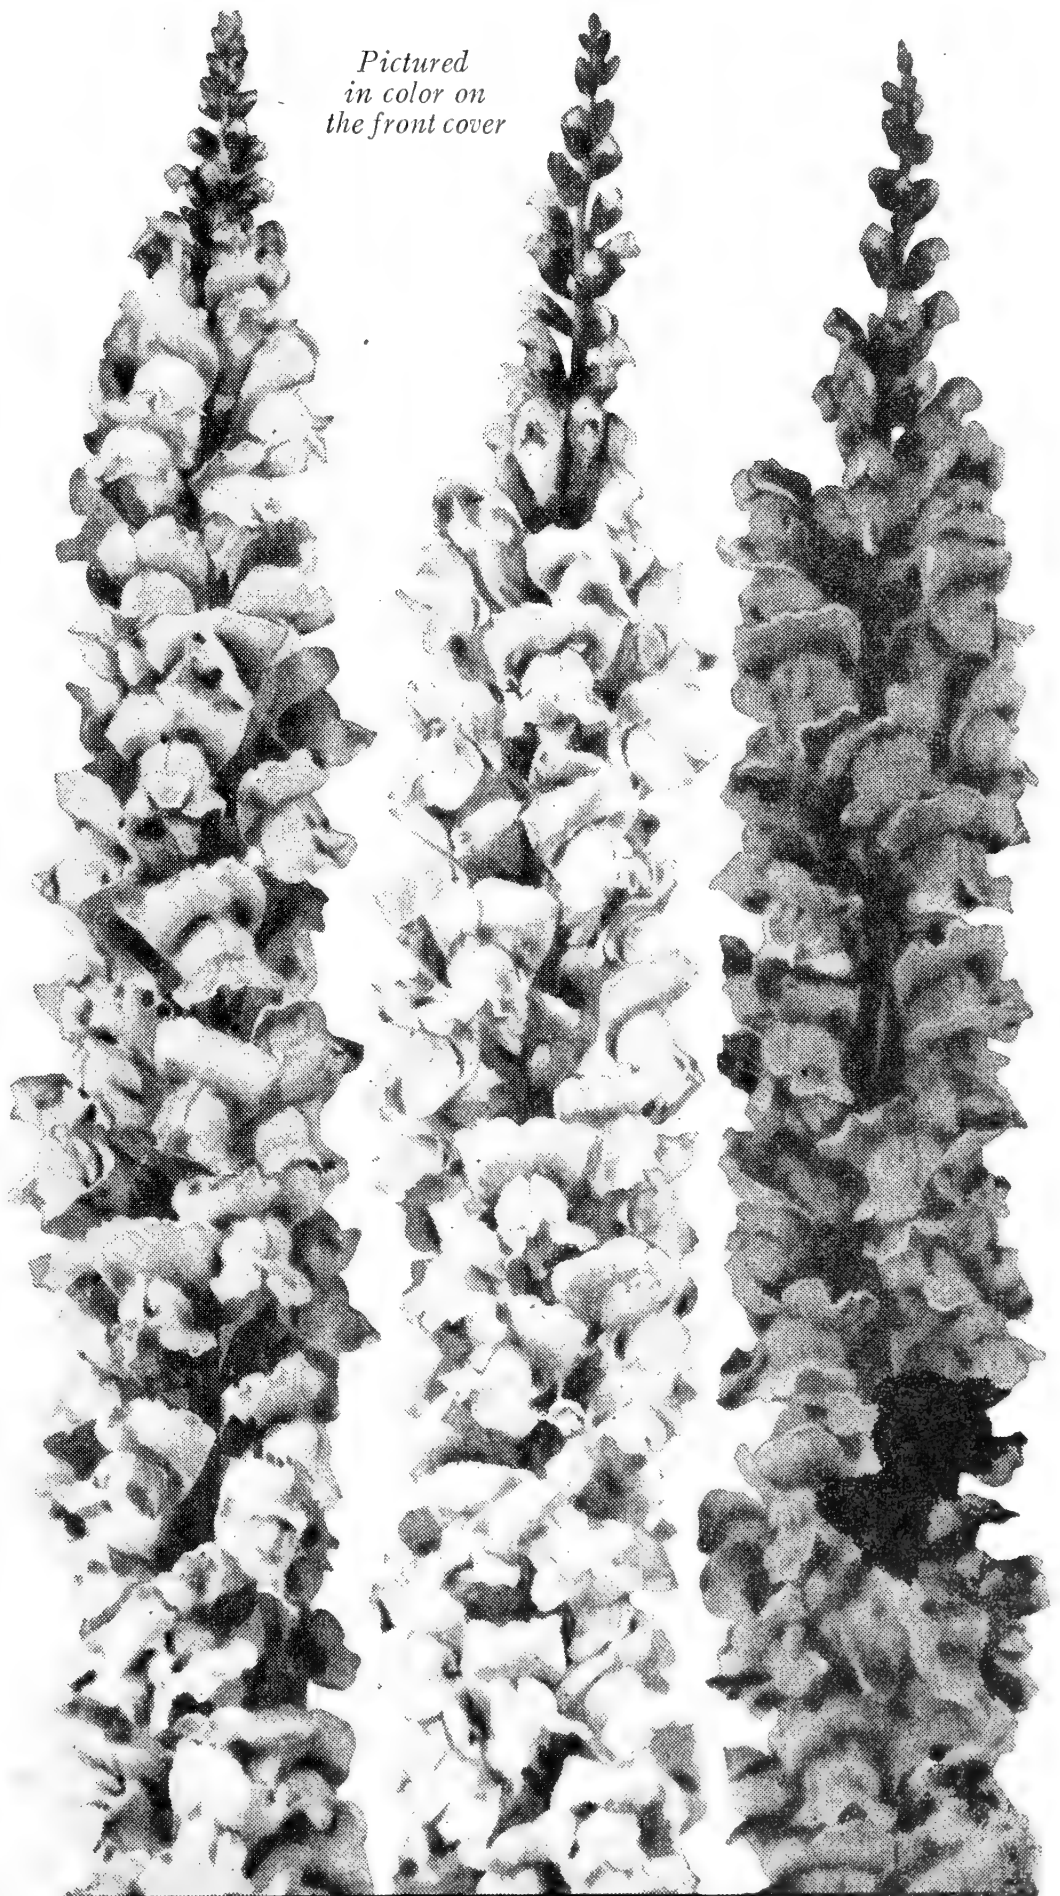

Giant Skyscraper Snapdragons come in a glorious blend of colors, mostly the softer shades,—sulphur-yellow, primrose-yellow, canary yellow, sulphur-yellow flushed pink, golden yellow with rose tube, apple-blossom-pink, light rose-pink, mid-rose, rose flushed golden, pink delilah, creamy white, creamy white flushed pink with an occasional rosy orange, rosy bronze or a delicate lavender. Space permits our showing only a few of these lovely colors on the front cover.

Skyscraper Snapdragons, whether in the garden or in cut-flower arrangements, are equally striking for their distinctive beauty.

SNAPDRAGONS

(botanically antirrhinums) have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding best in rich or moderately rich soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seeds outdoors when soil has become quite warm; for earlier blooms sow indoors six weeks before your regular outdoor planting time. Full cultural directions are printed on every packet. Best treated as annuals, although they are biennials in sections having mild winters.

Burpee's Double Snapdragons

The first giant, alldouble snapdragons ever grown from seed. Flowers are spectacular, not only for size but for their unusual and amazing formation. They are quite large, $1\frac{3}{4}$ in. across and $1\frac{1}{2}$ in. deep when well grown. The upper lip broadens and recurves gracefully. From the rounded portion of the lower lip there is a protruding flare which is slightly frilled. Between the lips, extending out from the throat, are several small, wavy accessory petals which add grace, charm and refinement, as well as surprise, to an already handsome flower of quality.

1612 LEMONADE — New for 1949

Immense, double, clear primrose-yellow flowers nicely placed on long, strong stems, the central one growing 3 ft. tall and blooming ahead of the laterals, three to five of which arise from the main stems close to the ground. Frequently, the flower-spikes are more than half the height of the plants so that a planting attracts immediate attention. Lemonade is truly a wonderful double snapdragon for cutting and garden decoration. **Pkt. 50¢; 2 pkts. 95¢; 3 pkts. \$1.25**

1610 BURPEE DOUBLE

New Type of Single Snapdragons

1525 Burpee's Fairy Rose is different from all other snapdragons—the flowers are smaller and more sprightly, stems slender with more of them produced on a plant. It has great appeal for garden use and cutting, especially where a light, airy, graceful effect is desired.

Plants, at first, are bushy and compact, but later spread 16 to 30 in. across depending on soil and climate thus producing numerous, erect spikes, 2 ft. tall, studded with slim, crisp flowers, 2 in. long and 1 in. across at the flare of lower lip. The general color of the standard is rose bengal; the rounded portion of the lower lip is sulphur-yellow which softly suffuses the standard and the flare of the lower lip to create a delicate shade of apricot. Distinct new beauty in color as well as form.

Giant Ruffled Tetraploid Snapdragons

Tetra Snaps are a new "scientific" creation—a group of snapdragons originated through the treatment of the best regular or diploid varieties with colchicine—a drug or chemical derived from the bulbs of fall crocus.

Flowers 2 to 2½ in. deep and 1¾ to 2¼ in. wide, many distinctly and attractively ruffled. Plants are strong and husky, with glossy, dark green foliage, thick and almost leathery in texture; the stems are quite thick. Under general field conditions the central spikes grow 2 to 2½ ft. in height; these are surrounded by lateral spikes of lesser height. Plants are base branching so that long-stemmed flowers are assured for cutting, and having good substance adds greatly to their keeping value in garden or when cut.

Genetically, Tetra Snaps are known as tetraploid snapdragons for, when examined under the microscope, they have twice the number of chromosomes in their cells as regular or diploid snapdragons—we call them tetra snaps for short.

1513 Tetra Orchid Rich shade of orchid-purple prettily marked with a sulphur-yellow blotch on lower lip. The massive spikes of large, closely placed, wide open flowers make a most impressive showing in beds and borders, or when used as cut-flower subjects. Pkt. 35¢; 2 pkts. 65¢; 3 pkts. 90¢

Burpee's Beautiful ASTERS

Asters are easy to grow. They prefer rich, well-drained soil and a warm, sunny location. For earliest blooms, sow seed indoors in boxes or seed-pans four to six weeks before your usual outdoor planting time. Set plants in the garden when weather gets warm. A continuous display of flowers from early summer until frost can be had by planting extra early, early and midseason blooming varieties. Asters are wonderful for cutting.

* Varieties marked with an asterisk (*) are the Wilt-Resistant Strain. They are highly immune to "Wilt disease" or "Stem-rot."

Burpee's Extra Early Asters

These very early flowering varieties begin to bloom in about 14 weeks after seed is sown—long before most other asters begin to bud. Extreme earliness and good cutting stems make them a most welcome type of aster for the home gardener and the florist. All created by Burpee on Floradale Farms.

1607 Heavenly Blue New for 1949 Large, feathery Crego-like flowers, 4 in. and more across, of an exquisite azure-blue color, the smaller petals curling over the center. Plants grow 2 ft. tall, bloom early with stems up to 16 in. long.

Burpee's Multiflora PETUNIAS

2499 Silver Medal
Pkt. 50c

2499 SILVER MEDAL—New for 1949

All-America Silver Medal Winner

Silver Medal is one of the finest single petunias ever introduced and named for the award bestowed upon it in the All-America trials. Flowers, 3 in. across, are borne in the greatest profusion from early summer until frost. When first opening, they are a lustrous salmon-cerise with orange undertone gradually changing to a delightful shade of rich salmon as they mature. Plants are low and bushy, grow 1 ft. tall with a spread of 18 to 20 in. Foliage is mid-green and offers a fine, bright contrast to the salmon colored flowers which are borne in such quantity as to practically hide the plants from view. Pkt. (100 seeds) 50¢; 2 pkts. 95¢; 3 pkts. \$1.35; 5 pkts. \$2.00

Burpee's Multiflora Petunias are true first generation (F₁) hybrids, the direct result of crossing two distinct parent varieties by hand-pollination.

Tests having been made as to which parents produce the most desirable progeny, alternate rows of the parents chosen are planted alongside of each other.

As petunias are practically self-pollinated, it is necessary for our experts to remove the pollen sacs from the rows of flowers of the female parent. This must be done before any pollen is shed or otherwise the hybrid cross would be contaminated. The next day after emasculation, pollen is taken from the flowers of the "male" rows and placed on the stigmas of the females.

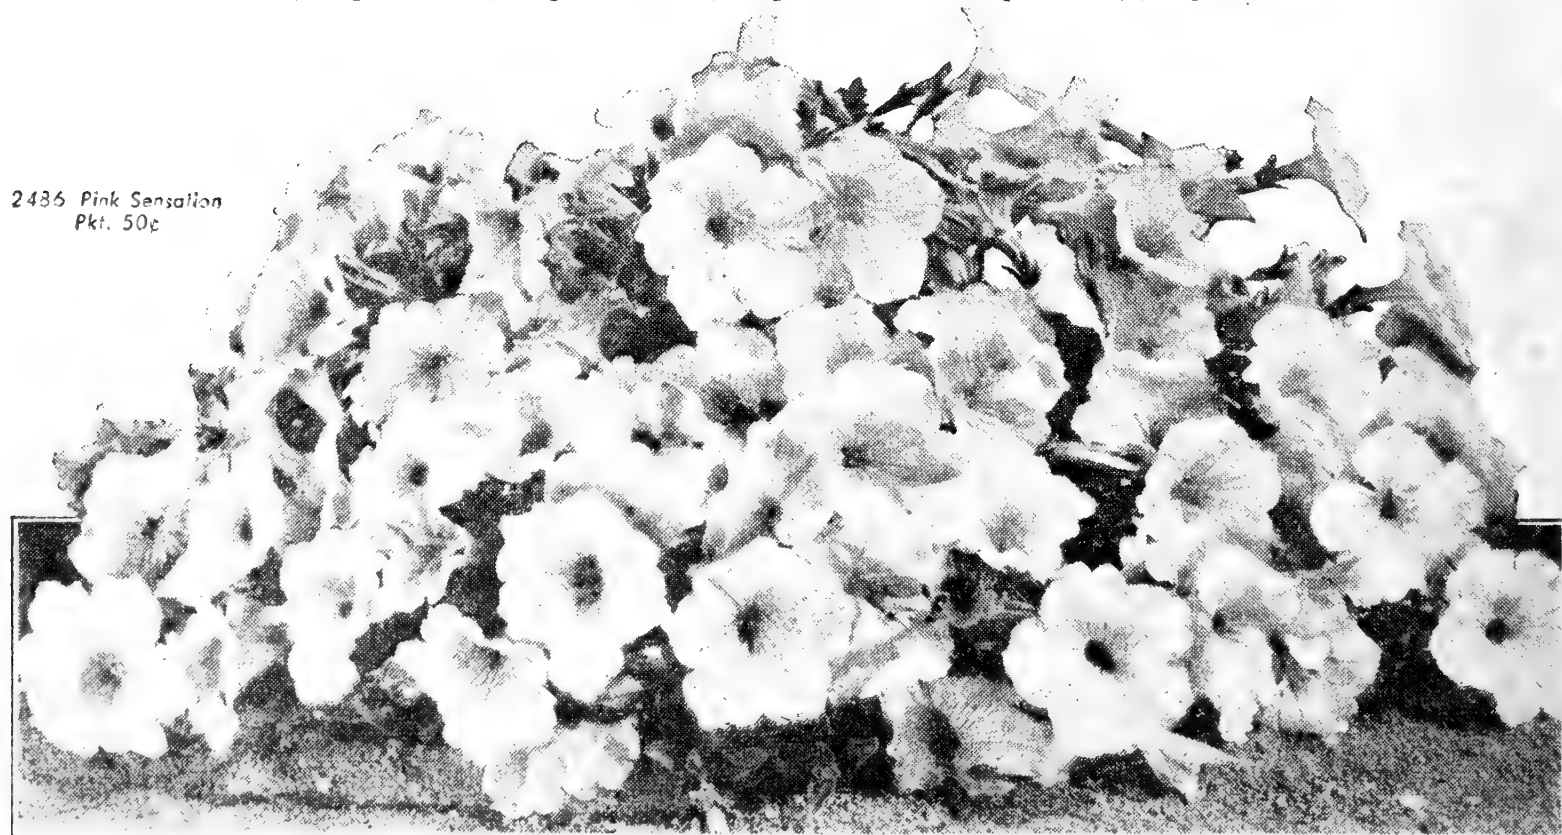

This carefully controlled crossing by hand of two distinct parent lines is very costly but the resulting seed will produce a hybrid of extreme vigor, more uniform in growth, with larger flowers and considerably more of them per plant. Our Multiflora Petunias are really outstanding, each having been judged medal winners by America's foremost flower critics in the trials of the All-America Selections.

Wonderful for large beds, wide borders and excellent for cut-flower purposes.

2486 PINK SENSATION

All-America Bronze Medal Winner

Plants are extremely vigorous, 2 ft. tall, as much as 4 ft. in width, and completely covered with flowers, 3 in. across. The color is rose bengal, more familiarly described as light rose-pink with deeper pink veining extending well out toward the edges from the white throat which is finely etched with brown. A metallic lustre adds life and sparkle. Pkt. (100 seeds) 50¢; 2 pkts. 95¢; 3 pkts. \$1.35; 5 pkts. \$2.00

Early Flowering SWEET PEAS

Burpee's Early Flowering Sweet Peas come into bloom outdoors before the summer heat arrives—usually 3 to 4 weeks earlier than the Burpee Giant varieties. They are valuable for winter flowering under glass, also especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. All types of sweet peas prefer an open, sunny location, and deep, rich soil which must be well drained.

Burpee's Fragrant NASTURTiums

2305
Dwarf Giant Double
Nasturtium,
Orange Glory
Pkt. 15¢

Ever popular plants of the easiest culture, blooming most profusely in ordinary, well-drained garden soil; if overly rich it will cause plants to produce more leaves than flowers. They are most useful plants for dry, sandy, or gravelly locations. Nasturtiums may be had in a great variety of shades and color combinations, single or double flowers and semi-tall or dwarf growing. Their varied colors, different shapes and refreshing fragrance make them most desirable for cutting.

Dwarf Giant Double Nasturtiums

Plants are of compact, bush or globular form, about 1 ft. high and 1½ ft. across. The gorgeous, giant double and semi-double sweet-scented flowers are produced most freely on very long stems, which makes them especially fine for cutting. Irregularly placed petal formation gives the blooms an unusually artistic appearance. Plants are dwarf, rounded and covered with flowers. Most attractive in beds, borders, edgings, rock gardens and pots. Uniform habit of growth.

2338 Cherry Rose An exquisite shade of soft cherry-rose. Flowers grow 2½ to 3 in. across and are produced earlier and more profusely than any other variety. Wonderful for cutting; very showy in the garden.

2306 Delightful Soft salmon-cerise, the upper petals oddly marked crimson-maroon at base. Flowers become deeper salmon-cerise with age.

2336 Garnet Gem Deep, rich, very bright garnet-red. The delightfully sweet-scented flowers have enough orange suffusion to enliven them with an iridescent glow that is most pleasing. Striking color.

2329 Golden Globe Exquisite, giant double and semi-double, pure golden yellow blooms cover the dwarf globe shaped plants.

2346 Mahogany Gem Darkest colored nasturtium we have ever seen; flowers are of a rich velvety deep but brilliant mahogany.

2305 Orange Glory The large, sweet-scented flowers are bright orange, with wonderfully fluted and crinkled petals; base of each of the upper ones and inside of throat distinctly painted deep garnet-brown.

2348 Primrose Gem Giant double, sweet-scented, soft primrose colored flowers are freely produced throughout the entire season.

2327 Scarlet Globe Showy, giant double and semi-double, sweet-scented, fiery scarlet blooms are borne in the greatest profusion.

Attractive and tasty. Pkt. 35¢; 2 pkts. 65¢; 5 pkts. \$1.50

DOUBLE LARGE FLOWERED STOCKS

Heavy spikes of handsome, fragrant flowers, like small rosettes, are produced in a wide range of soft and distinct shades. Fine for bedding, borders and cutting. For best results, sow seed indoors in shallow boxes or seed-pans 6 to 8 weeks before your usual outdoor planting time. Keep in a temperature of 65° F. or less from the time the seed is sown until the plants have made 8 leaves so that they will form buds. When plants are large enough to handle, pot them up singly and grow on in pots until weather and soil have become warm, when they should be transplanted to the garden where they are to remain.

Perennial Flowers are the hardy permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required before the plants produce their blooms.

Perennials are most important flowers in the garden. With proper selection they can be had in bloom from early in the spring until late in the fall, beginning with the showy golden yellow *Alyssum saxatile compactum*, *Columbine*, *Delphinium* and others, ending the season with the fall *Chrysanthemums*. Cultural directions are given on every bag. With the perennials we have included the best of the biennials, seed of which is sown one year, the plants blooming the second season, after which they die.

Average heights and blooming season are given in the descriptions.
Some variation is natural in different localities.

EDIBLE SOY BEAN

35 Bansei 96 days for use as green shelled beans. One of the most productive and will produce crops in nearly any section of the country. The plants are erect, bush-like and literally loaded with pods, each containing 2 or 3 oval-shaped, bright green beans which are delicious cooked as green shelled beans. When fully matured, the dried beans are yellow and may be cooked similarly to lima beans. Suitable for freezing. High in proteins and vitamins. Pods are short, fuzzy, not edible, and borne high in the plants which are rigid, upright and grow 2 to 2½ ft. tall. Immune to practically all diseases and insects which commonly attack garden beans. Stands heat and drought and will even do well on poor soil. For use as green beans, use seeds as soon as they are fully formed. A pkt. will plant 25 ft. of row; 1 lb. 150 ft.

Pkt. 10¢; ½ lb. 30¢; 1 lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25

GIANT BUTTER or FAVA BEAN

Mammoth pods with 5 to 7 lima-like beans

24 Long Pod 85 days. Giant Butter or Fava are the well-known Broad Beans, much harder than other beans and should be planted as early in the spring as the ground can be worked; they will not thrive in summer heat. Plants are large and erect, true bush form, and heavy yielders. Pods are glossy green, 7 in. long, and contain 5 to 7 large, oblong-shaped, flat, light green beans, which are valuable for use as green shell beans. The pods are not edible; the large beans somewhat resemble lima beans and should be used in the same way, either cooked fresh or as a winter shell bean. Flavor is somewhat like that of the pea. Becoming very popular, especially in large city hotels and restaurants. Dry seed is large, circular, flat, reddish brown with black eye. Try a planting this year. One pkt. is enough for 15 ft. of row; 1 lb. 75 ft. of row.

Pkt. 10¢; ½ lb. 35¢; 1 lb. 60¢; 2 lbs. \$1.10; 5 lbs. \$2.50

Maturity Dates

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the garden. Of course, the time is average, having been obtained over a period of years in our trial grounds under different conditions; some variation is to be expected, depending on the season, locality and time of sowing. The approximate maturity dates given will show the relative time when different varieties will be ready to use.

◎ Follow the Bull's Eye ◎

We have used this mark, ◎, for years to guide the gardener in the selection of vegetable varieties which we believe will give the best results under varied conditions of soil and climate. If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They have been found most satisfactory throughout the country.

BUSH SHELL BEANS — may be used either green or dried

Grown mostly as dried beans for winter use; the pods of Dwarf and French Horticultural may be used, when young, as snap beans. The culture is similar to that recommended for bush beans on page 58, but shell beans should be left on the plants until the pods are matured. The bushes are then cut, allowed to dry, and the beans threshed and thoroughly dried out before they are put away for later use. A pkt. will sow about 25 ft. of row; one lb. 150 ft. of row. Many varieties of pole beans, listed on page 61, are also desirable as shell beans.

30 Michilite Pea Bean 90 days. Similar to Improved White Navy but more uniform, productive, and of better quality. The small white beans are used for baking, boiling and soup, or dried for winter.

Stringless Green-Pod BUSH BEANS

Before the introduction of stringless bush beans, green and yellow podded varieties were known as string beans and this name, unfortunately, seems to remain in many localities. Now that strings and tough fiber have been bred out of these varieties, we

are referring to them as snap beans. Take a pod, green or yellow, break it quickly and see how it snaps. Pods are most delicious, raw or cooked, if picked when quite young and tender. They have more vitamins than, are better for you, and, of course, they taste better.

How to Grow Bush Snap Beans

Plant seed when danger of frost is past and the soil is warm, in rows 18 to 30 in. apart for hand cultivation or 2½ to 3 ft. apart for field cultivation. Make furrows about 2 in. deep and space the beans 2 to 3 in. apart in the row. Cover with fine soil and firm the soil over the seed with your foot or the back of a rake to insure good germination. When plants are 2 or 3 in. high, thin to stand 4 to 6 in. apart in the row. For a continuous supply of tender pods, make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to bear before frost. Plants grow 15 to 20 in. tall and will bear more pods if you pick them when young at which time they are truly delicious. A pkt. of seed will sow about 25 ft. of row; one lb., 150 ft.

Burpee's POLE BEANS

Pole beans come into bearing later than bush beans, yield more heavily over a longer period and some produce bigger pods. Support must be given the vines which grow 5 to 8 ft. and more high. Young pods make delicious snap-shorts; also popular as green or dried shell beans. To many persons, pole beans have that good bean flavor that is lacking in some varieties of the bush type. The most popular and dependable varieties are Kentucky Wonder, McCaslan (green-pods) and Kentucky Wonder Wax (yellow-pod). Horticultural is grown largely as a shell bean.

72 Kentucky Wonder ☉ — Brown seeded

Though thick, the pods appear slender on account of their length. The light brown seeds have a distinctive, tasty flavor which makes them so highly desirable for use as shell beans. A profitable market bean in many sections.

Kentucky Wonder Pole Beans

How to Grow Pole Beans

Pole Beans should not be planted until all danger of frost is past and the soil is warm and moderately dry. They do best if the vines are given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Place 5 or 6 beans around each pole, cover with 2 in. of soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A packet of seed is enough for 15 poles; 1 lb. of seed for 100 poles, except Scarlet Runner, a pkt. of which is enough for 8 poles; 1 lb. for 60 poles. Pole Beans may also be planted 3 to 5 in. apart along a trellis or fence; sowing 300 ft. of row with 1 lb. of seed.

Bush LIMA BEANS

Easier grown than pole limas as plants do not need support. There are varied sizes and shapes of beans to meet your preference, whether it be the large thick (Burpee's Fordhook) or small thick "potato" type (Baby Fordhook), the large flat (Burpee's Improved) or the small flat baby butter lima (Thorogreen). Some prefer one type for eating fresh, another as dry beans or quick freezing. We list the best varieties for the different purposes. For eating fresh, pick pods as soon as the beans have reached edible size.

65 Burpee's Fordhook © — *Most popular bush lima*

75 days. The leading variety of bush lima beans for home garden, freezing or commercial use. Pods are 4 to 4 1/4 in. long, 1 to 1 1/8 in. wide, and 3/4 in. thick, dark green, straight to slightly curved, crowded with 3 or 4 large, thick beans whose dry, mealy quality and delicious flavor, not unlike chestnuts, are familiar to everyone who uses lima beans. Seeds hold their green color until quite old; cream colored when ripe.

Plants are bushy, upright, with large leaves of heavy texture, 20 in. or more in height, with a spread of 2 ft. or more, very vigorous, with many pod-bearing lateral branches, so that from a planting picking may be done for a month or more.

Fine quality, large pods, and always salable, attractive appearance, made Fordhook the universally known large "potato" type bush lima bean for all purposes. Introduced by Burpee and named for Burpee's famous Fordhook Farms. Buy from the originator.

How to Grow Bush Lima Beans

Bush Lima Beans succeed well in almost any good garden soil but do best in a rich, well-drained, sandy loam. As seed is sensitive to cold and wet ground, it must not be planted until the soil has become quite warm and fairly dry. Plant the seeds edgewise, eye down, 4 in. apart in rows 2 1/2 to 3 ft. apart, and cover with 2 in. of fine soil. When the plants are well started, thin to stand 12 in. apart for large-seeded varieties and 8 to 12 in. for small-seeded varieties. Give frequent and shallow cultivation until blossoms appear, but do not cultivate or handle plants when they are wet. A pkt. of large-seeded varieties will sow 15 ft. of row; one lb. 100 ft.; the small-seeded kinds will, of course, go much farther.

Pole LIMA BEANS

Pole Lima Beans mature somewhat later than bush limas and must be given support on which the vines may climb. The yield per sq. ft. of garden space is larger than that for bush limas. Some persons prefer the flavor of pole lima beans to the bush varieties, some like the thick-seeded or "potato" type (Burpee's Best), others the flat-seeded (Burpee's Giant Podded), some choose the large seeded, others the small; all are good—it's a matter of individual choice and for what purpose intended—to be eaten green, dried, canned or quickly frozen.

105 Burpee's Best ☉

92 days. A pole bean with all the good characteristics of Fordhook Bush—thick seed, rich tenderness, larger pods with three or four times as many on each of the vigorous plants which are strong growing climbers attaining 10 to 12 ft. under average conditions. They produce pods in clusters of 4 to 8 along their entire height. Pods are straight, 4 to 4¾ in. long, 1¼ in. broad, and ½ to ¾ in. through, well filled with 4 or 5 big, plump, "potato" type beans that are exceptionally tender and have the distinctive, pleasing nutty flavor of the bush Fordhook. More easily shelled than other limas of the "potato" type. Burpee's Best is excellent for freezing and has remarkable long-distance shipping qualities.

Pkt. 15¢; ½ lb. 45¢; 1 lb. 80¢;
2 lbs. \$1.50; 5 lbs. \$3.50

106 Burpee's Giant Podded ☉

90 days. The largest podded and largest beans of all pole limas. Pods are truly enormous, 6½ to 7 in. long, 1¼ to 1½ in. wide, with 5 and sometimes 6 extra large, oval-flat, green beans of the most delicious flavor; excellent for freezing. Vines are vigorous growing; attain a height of 10 ft. and freely produce their pods in clusters of 4 to 8 from the bottom to the top of the poles. Pickings may be made continuously from midsummer until vines are killed by frost. We can recommend it highly for home gardens; also readily salable on local markets and roadside stands because of the immense size of pods and beans.

Pkt. 15¢; ½ lb. 45¢; 1 lb. 80¢; 2 lbs. \$1.50; 5 lbs. \$3.50

103 Carolina or Sieva—"Butter Bean"

78 days. Pods grow 3 to 3½ in. long, and contain 3 or 4 small, flat, smooth beans of splendid quality. Quick to bear, so are especially valuable in sections with short summers, where large-seeded varieties are too late to produce well, and in localities with hot, dry summers where pods often fail to set.

Pkt. 10¢; ½ lb. 35¢; 1 lb. 60¢; 2 lbs. \$1.10; 5 lbs. \$2.50

102 Florida Speckled Butter

78 days. Vigorous plants; pods medium dark green, 3 to 3¼ in. long, each with 3 and occasionally 4 small, flat, white beans with approximately one-third of the surface marked deep purple. If picked when young, the markings on the seed will not yet have been developed. Prolific over a long bearing season. Stands up well under hot and dry weather conditions; popular in the South.

Pkt. 10¢; ½ lb. 35¢; 1 lb. 65¢; 2 lbs. \$1.20; 5 lbs. \$2.75

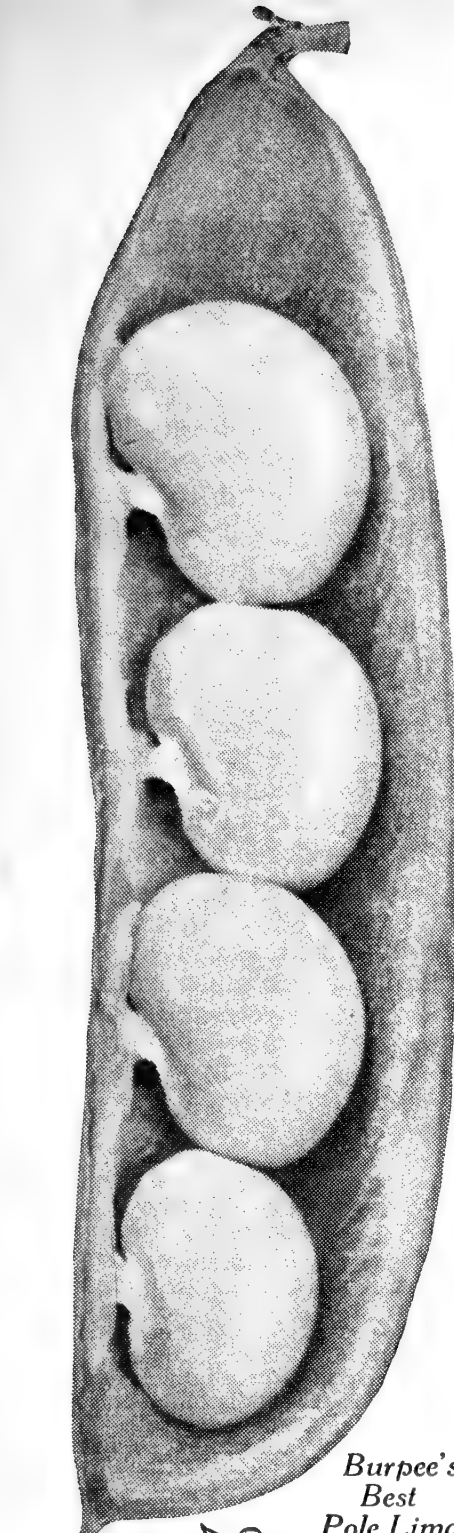

99 King of the Garden—Popular

88 days. Pods are from 5 to 6 in. long and contain 5 and often 6 large, flat beans which are easily shelled, of handsome appearance and excellent quality. They are borne most profusely until frost has killed the vines. One of the leading pole limas for freezing, home and market. Plants are tall; good climbers.

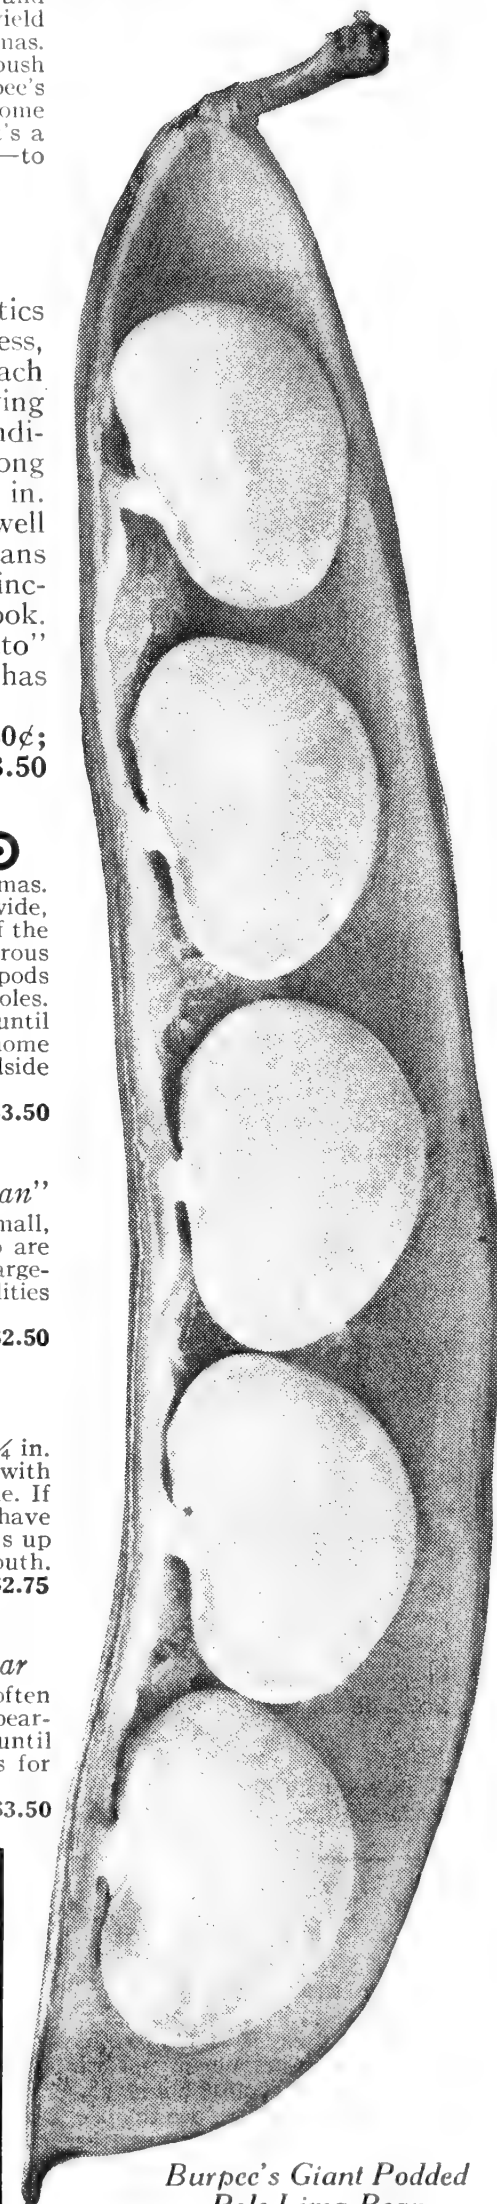

Pkt. 15¢; ½ lb. 45¢; 1 lb. 80¢; 2 lbs. \$1.50; 5 lbs. \$3.50

How to Grow Pole Lima Beans

Pole Lima Beans are easily grown in any rich, well-drained garden soil. Should be given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Sow seeds when soil has become warm; put 6 to 8 seeds (preferably with the eyes down) around each pole, cover with 2 in. of fine soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A pkt. will plant 10 poles; 1 lb. for 50 poles. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. of seed to about 50 ft. of row; a pkt. will plant about 10 ft.

Pole Lima Bean

Burpee's RED BEETS

Beets are easily grown and are delicious as baby beets when roots are half grown, or they may be used from then on until they reach their full size. Tops are highly palatable when cooked as "greens" or young beets with their tops may be cooked together.

Burpee's Red Ball, Detroit Dark Red and Crosby's Egyptian are universally popular. Spinach Beet (Swiss Chard) is grown extensively for the use of its tops as "greens" and its mid-ribs or leaf-stalks as asparagus; we offer the best varieties on page 102.

*Burpee's
Red Ball*

121 Burpee's Red Ball ☉

60 days. Remarkable for its uniform shape, deep colored flesh, and sweet flavor. The roots are globe-shaped, growing to 3 in. in diameter, with smooth, deep red skin and medium-small tap root. Flesh is tasty, extremely dark red, free from woody fiber, and under good growing conditions, is practically free from lighter colored zones. Quality is always the finest. Its intense dark red color especially fits it for table use. For a market where dark red colored flesh is a primary requirement, for canning, freezing or any commercial use, Red Ball is highly recommended. Medium tall red and green foliage.

oz. 40¢; ¼ lb. \$1.10;
½ lb. \$2.00; lb. \$3.50

128 Burpee's Improved Blood Turnip Beet

59 days. The large beets, 3 to 4 in. across, are round but sometimes deeper than their diameter. Flesh is dark red, occasionally zoned, fine grained, tender and most agreeably sweet. Though it is a quick grower, the roots will keep a long time in storage. Splendid for the home garden and for market gardeners. It may be grown for early use, summer, fall or winter storing as well as for canning. Because of its quickness of growth, it is especially suited for late sowings. It is really an all-season, all-purpose, dependable deep red table beet of the highest quality.

Pkt. 15¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.60; lb. \$2.85

115a Detroit Dark Red, Short Top ☉

60 days. One of the best round beets for main-crop and fall use whether for table, canning or freezing. Tops average about 3 in. shorter than those of the regular strain, making it suitable for growing on muck or for any use where large tops are not necessary or desirable. Roots are also slightly smaller and more globular. Skin is dark red; flesh is uniform deep red with the zones so inconspicuous that the flesh, when cooked, seems to be one solid ball of deep blood-red; always sweet and tender. Smaller tops allow beets to stand closer together in the row.

Pkt. 15¢; oz. 35¢; ¼ lb. 95¢; ½ lb. \$1.60; lb. \$2.85

115 Detroit Dark Red, Medium Top

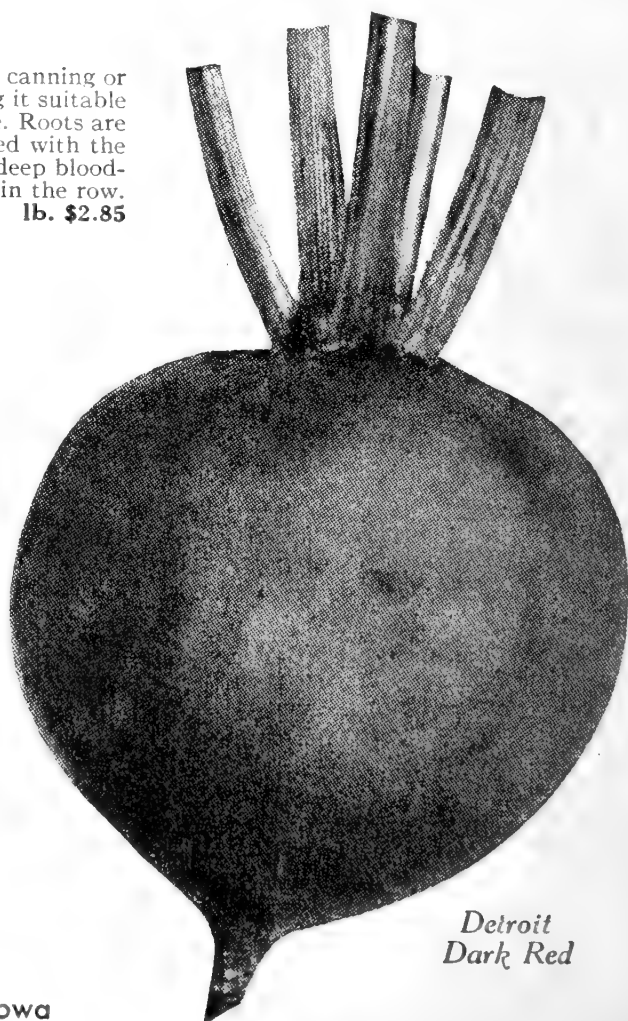

59 days. Beets are perfectly round with deep red skin. They reach 2½ to 3 in. in size and have a small collar and a thin tap-root. The flesh is very dark blood-red, showing hardly any zones. It is tender, fine grained, exceptionally sweet. Medium size foliage makes it popular with housewives wanting plenty of "tops" for use as "greens." Roots are slightly larger than the short top strain offered above. Splendid for the home garden, market, shipping, freezing and canning.

Pkt. 10¢; oz. 30¢; ¼ lb. 85¢; ½ lb. \$1.50; lb. \$2.50

It is easy to order Burpee Seeds by mail. If you live in the East, send to Philadelphia; if in the Central and Western States, send to Clinton, Iowa.

How to Grow Beets

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to mature before frost. Space rows 1½ to 2 ft. apart and cover seed with ½ in. of fine soil. A rich, sandy loam, mellow and deep, produces the best shaped and smoothest roots. Thin plants to stand 2 to 3 in. apart in the row. The later sowings will produce the best beets for winter storing. Dig the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth until ready to use throughout the winter months. A pkt. of seed will sow 25 ft. of row; one oz. 100 ft.

Burpee's Earliest CABBAGE

Cabbage is easily grown and may be eaten raw as cole slaw or cooked in different ways. While the smooth leaved varieties are the most popular, some prefer the green savoy crumpled leaved (Perfection Drumhead); others, the deep purplish-red (Mammoth Red Rock); some the round heads (Copenhagen Market); others, the

pointed (Early Jersey Wakefield) or flat (Premium Flat Dutch). We have the best kinds to meet your choice. Some of the mid-season and late varieties make excellent kraut; all the late varieties are desirable for fall use and winter storing. Chinese Cabbage may be served like lettuce, cole slaw or cooked like regular cabbage.

*Burpee's
Copenhagen Market*

192 Burpee's Copenhagen Market ☉

72 days. An outstanding strain of the variety which is notable for its uniformity from year to year as well as in a single year's planting. This uniformity makes it valuable to home gardeners and to market growers who supply a critical trade. Extreme earliness is another quality of this cabbage which has found favor with our customers all over the world. Produces well-rounded, solid heads of excellent quality, 6½ in. in diameter and 6 in. deep, weighing from 4 to 4½ lbs. Plants are small and quite compact with few outer leaves, which permits close planting. Heavy yield, convenient size, attractive shape, solidity and fine quality combine to make Copenhagen Market the popular early cabbage it is today. The flavor is remarkably fine so that it is also desirable for early kraut making. Reliable and uniform. First introduced in America by Burpee.

Pkt. 15¢; ½ oz. 40¢; oz. 70¢; ¼ lb. \$2.00

169 Charleston or Large Wakefield

71 days. Larger than Early Jersey Wakefield, not so pointed and ready about six days later. The broad, heart-shaped heads are 8½ in. high and 6½ in. across at the base; weigh 3½ to 4½ lbs. each. Very desirable for the home or truck garden; it is a sure cropper and a heavy yielder. Popular in the South for winter shipping to northern markets for which purpose it is extensively used. Outer leaves are dark green; interior loosely folded, tinged greenish, of excellent quality. A good succession variety to Golden Acre or Early Jersey Wakefield.

Pkt. 10¢; ½ oz. 35¢; oz. 60¢; ¼ lb. \$1.80

191 Early Jersey Wakefield (Yellows-Resistant)

Fine for cole slaw, salads and for boiling. Recommended in place of Early Jersey Wakefield only on soils infested with "yellows." If you have any cabbage-yellows infection in your soil and want an early, pointed headed, compact growing cabbage, plant this and not the regular one.

Pkt. 15¢; ½ oz. 40¢; oz. 70¢; ¼ lb. \$2.00

YELLOWS-RESISTANT CABBAGE

Yellows-resistant strains were introduced by the Wisconsin Agricultural Experiment Station so that cabbages could be grown in localities where infested "cabbage-yellows" soil had prevented non-resistant varieties from producing a crop. If you live in such a locality and have had trouble, try the following highly "yellows"-resistant varieties:

- 181 Golden Acre See page 66.
- 172 Improved Allhead Select See page 66.
- 170 Marion Market See page 66.

How to Grow Cabbage

For earliest crop, start early and mid-season cabbage seed in hotbed or house; for medium early cabbage, seed may be sown in a coldframe or open-ground seed-bed in early spring. Sow late cabbage for winter use in a seed-bed outdoors when soil has become thoroughly warm. A pkt. will produce about 250 plants; an oz. about 2000 plants. Days to maturity are figured from the time the plants are set in the garden; allow 30 days to produce plants from seed. Cabbage does best in deep, rich, loamy soil and should be given plenty of water during prolonged dry spells. Space early cabbage plants 18 in. apart in rows 2½ ft. apart; the large mid-season and late varieties 2 ft. apart in rows 2½ to 3 ft. apart. Cabbage should never be planted in the same location where it, cauliflower, broccoli, or any of the cabbage family had been planted the previous year. Healthy, solid heads of late cabbage may be stored for winter use.

See next page for Late Cabbage . . 67

CHINESE or CELERY CABBAGE

Not a true cabbage; resembles Cos Lettuce somewhat. May be served like lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary cabbage. Adapted to quick freezing. Where summers are cool, seed may be sown in early spring, otherwise sowings should be made about 3 months before your first expected frost. If sown too early, plants will "bolt" during hot weather and not form heads. Packet will sow 25 ft. of row, an oz. 200 ft.

214 Chihli 73 days. An early, elongated heading Chinese Cabbage, growing 18 to 20 in. tall and about 3½ to 4 in. thick. The firm, well-blanching, white heads taper near the top. Burpee's CAULIFLOWER

Heads should be used as soon as they fill out, otherwise they will lose in quality and break. Uncooked cauliflower is delicious, when head is broken up into small pieces, chilled, and used as a relish with mayonnaise. Cooked cauliflower is a delectable dish; nice too when

used with cucumbers, onions, peppers, etc., in mustard chow-chow. Burpee's cauliflower seed is produced under ideal climatic conditions on our Floradale Farms and is the equal of that grown anywhere in the world. We offer the best six leading varieties.

Cauliflower is best grown as a fall crop in the greater part of the United States, although in regions where summers are reasonably cool, sowings may be made indoors or under glass, 30 to 40 days before it is time to set plants in the garden.

Days to maturity given in descriptions are from the time the plants are set out in the garden. These are average and will vary somewhat in different seasons and sections.

245 Burpee's Dry Weather

95 days. Though cauliflower does best in a cool and moist season, we have in Dry Weather a variety which is actually drought-resistant and will produce heads when other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a cauliflower of the highest quality, producing large, pure white heads that weigh 2 to 3 lbs. each. If you have been unsuccessful in getting cauliflower to head, try Dry Weather. **Pkt. 25¢; 2 pkts. 45¢; 1/4 oz. \$1.00; 1/2 oz. \$1.90; oz. \$3.70**

251 Early Snowball—A ⊙

258 Veitch's Autumn Giant

How to Grow Cauliflower

For a main or fall crop, sow the seed thinly in a specially prepared seed bed or coldframe about 4 months before your first expected frost. Thin out from time to time to allow ample room for development. It is important that cauliflower seedlings are not allowed to become crowded in the plant bed. When plants are ready to be set in the garden, space them 1 1/2 to 2 ft. apart, in rows 2 1/2 to 3 ft. apart. They must always be kept in a healthy growing condition until heads are formed. Any stunting of growth, due to lack of moisture or low fertility, may prove harmful to the crop. A packet will produce about 150 plants; 1 oz. 4000.

WINTER CAULIFLOWER

155 St. Valentine Broccoli 150 days. Large, solid, white heads identical to cauliflower. Too late maturing for general Eastern culture. Recommended as a winter crop, especially in the Pacific Coast area, where season is long and weather is cool.

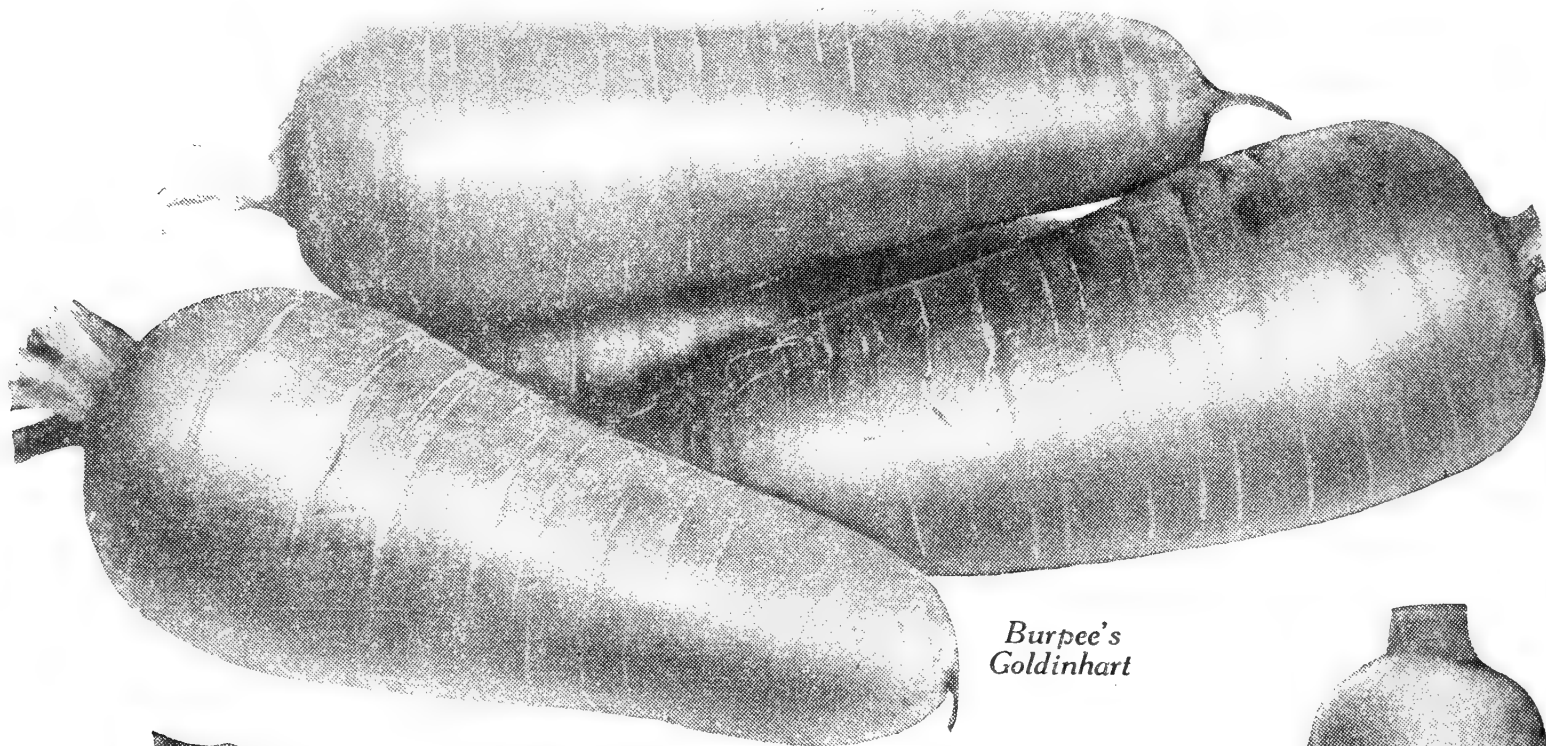

Pkt. 20¢; 1/2 oz. 85¢; oz. \$1.50; 1/4 lb. \$5.00

Burpee's CARROTS

May be used at different stages of growth but are at their best if eaten when half grown or smaller. 224 Burpee's Goldinhardt ⊙

70 days. Our special strain of Red Cored Chantenay. Selected for uniformity, trueness to type, deep exterior and interior color, and a small, indistinct core. 223 Burpee's Oxheart Carrot

75 days. Splendid midseason carrot, which may be used while the roots are still small. If allowed to mature, the broad, stocky, heart-shaped carrots will measure 4 to 4½ in. long and 3 to 3½ in. across where they are thickest; this gives a large amount of edible flesh, which is light orange, tender, sweet and of delicious flavor. For stock feeding

100 days. Very productive carrot with roots 12 to 18 in. long, broad at the shoulder, and gradually taper to a fine point. The skin below the ground is lemon-yellow, but above the soil surface it is green. Will yield heavily, especially in deep, mellow soil. Of high value for feeding cows, horses and sheep during the fall and winter. Easy to harvest as the large size roots grow partially above the surface of the soil as they become fully developed. Good keepers of fine quality. Not suitable for table use.

How to Grow Carrots

Sow seed thinly in early spring in rows not less than 12 in. apart and make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to mature before frost. Cover the seed with ½ in. of fine soil. Thin the small early varieties to stand 2 in. apart in the row and the larger, later varieties from 2 to 3 in. A rich, mellow, deeply worked soil gives the finest carrots. The later sowings will produce nice, tender carrots in the fall; these are the best for winter storing. A pkt. will sow about 30 ft. of row; an oz. about 200 ft.

◎ FOLLOW THE BULL'S EYE ◎

If you are in doubt as to which varieties of vegetables to choose, make your selection from those marked with a bull's eye (◎). They represent, in our opinion, those varieties which do well under the most varied conditions of soil and climate. Each and every one is reliable.

THE EFFECT OF SEASON, LOCALITY, ETC.

Throughout the vegetable section of this catalog, we have given the approximate maturity dates and other comparative information about varieties such as their size, shape, etc. It should be understood that weather conditions, climate, soil, locality and time of sowing may have an effect on any or all of these characteristics.

Burpee's CELERY

A most popular vegetable served raw as a relish or cooked in different ways. May be used from the time plants are one-half or two-thirds grown until fully matured. Stalks may be blanched to make them more crisp and tender, although many persons prefer them unblanched, especially Burpee's Fordhook, Giant Pascal, and Utah, all famous green celeries. Some varieties, such as Burpee's Fordhook, are highly desirable for winter storage either where grown and protected from freezing or lifted and put in soil in a cold cellar.

272 Burpee's Fordhook ☉

130 days. Burpee's Fordhook Celery is, without question, the best fall and winter variety in existence. Plants are stocky and compact, growing 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance, since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a large, tightly folded full heart of the most delicious flavor. Always tender, crisp, without strings, and juicy. Time of maturity and the dark green color before blanching make Fordhook an ideal variety for winter storage. We offer our improved strain.

260 Burpee's Golden Self-Blanching ☉—Early

115 days. First introduced in America by Burpee. This is the American-grown seed produced from the dwarf French-grown stock. Grown extensively by home gardeners as well as by market growers. The plants make a compact, medium growth and form thick, solid, heavily ribbed stalks which blanch easily into a beautiful clear waxen yellow color. The stalks and heart are crisp, solid, heavy, free from any strings and of the most delicious flavor. Choice quality.

Pkt. 20¢; 1/2 oz. 75¢; oz. \$1.35; 1/4 lb. \$4.25

263 Cornell 19 ☉—Outstanding, early, self-blanching

120 days. Early, vigorous, self-blanching, and resistant to fusarium yellows. Plant 20 to 23 in. tall with thick heart, and rounded, fairly smooth, fleshy stalks. Combines the high quality of Utah with the self-blanching characteristics of Golden Self-Blanching. Highly recommended as a main-crop variety for all celery growing regions and as a midwinter crop in Florida.

Pkt. 25¢; 2 pkts. 45¢; 1/2 oz. 85¢; oz. \$1.60; 1/4 lb. \$4.75

Pkt. 10¢; 1/2 oz. 45¢; oz. 85¢; 1/4 lb. \$2.50

282 Giant Pascal—Known as Winter King

135 days. Considered by many the standard winter celery. Plants are large, upright and very heavy. Stalks are tall, thick, solid, stringless, and of a rich, nutty flavor; broad, distinctly ribbed, tender, crisp and very tasty. After blanching they are an attractive light yellow. If properly stored, it will keep in perfect condition throughout the winter months. Whether grown for home or market use, Giant Pascal has always given entire satisfaction.

Pkt. 15¢; 1/2 oz. 65¢; oz. \$1.25; 1/4 lb. \$3.75

268 Golden Plume or Wonderful

115 days. Splendid early celery developed from the famous Golden Self-Blanching; the stalks, however, are larger. It is quite resistant to blight and rot and possesses very good eating qualities. Plants are of medium size, stocky, compact, and have a solid, full, creamy heart of the highest table quality. The thick, heavy stalks blanch readily to a beautiful light yellow; flavor is distinctly nutty and rich. The many good qualities of this widely grown early yellow celery commend it to all growers for home and market.

Pkt. 20¢; 1/2 oz. 75¢; oz. \$1.35; 1/4 lb. \$4.25

How to Grow Celery

For the earliest crop, start the seed in a hotbed or in the house, allowing 10 to 14 weeks to produce plants large enough to set out when weather gets warm. For the fall or main crop, sow seed in the open ground as early in the spring as the soil can be worked into good condition. Cover seed with no more than 1/4 in. of fine soil. Celery requires a rich, well-manured soil and plenty of moisture for best results. Soil, boards, or celery paper may be used to blanch the stalks. A pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants. Days to maturity are from the time the plants are set out in the garden.

Hybrid Yellow SWEET CORN

Hybrid Corns are of special value to market growers, canners and to many home gardeners because the ears from one planting mature at about the same time; in addition to this uniformity of maturity they are noted for their high yield and resistance to Stewart's disease or bacterial wilt. If you prefer to have ears over a long period, plant two or more hybrids of different maturity dates. It is not advisable to save seed from plantings of any hybrids because there will be a reduction in yield the next year. For best results, be sure to get new seed each year.

321 Burpee Surecross — *Fine flavored*

85 days. A most vigorous, high yielding, yellow hybrid of the main-crop class. Ears average 9 in. long, with 12 to 16 rows of rich yellow kernels of good quality. The deep green, vigorous plants, 6 to 6½ ft. in height, usually bear two ears each, the ears held at a good angle from the stalk thus making it easy to harvest. Its fine flavor and dependable production recommend it for home and market garden.

Burpee's Golden Bantam
Introduced by Burpee in 1902

How to Grow Sweet Corn

Plant seed after all danger of frost has passed and the soil has become thoroughly warm, in rows 2½ to 3 ft. apart, spacing the seeds 4 to 6 in. apart in the row; cover with 1 in. of soil and later thin to stand 8 to 12 in. apart. Some prefer to sow 4 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups 2 to 3 ft. apart in the row; allow 2 or 3 plants to remain in a group. Corn should be planted in blocks of at least 4 rows side by side rather than in a single long row, to insure pollination and the development of a full set of kernels. A pkt. will plant 4 rows, each about 25 ft. in length; 1 lb. will plant 300 groups or "hills."

Georgia Collards

BROCCOLI Italian Green Sprouting

Most easily grown and delicious flavored vegetable for home, market and freezing. Plants are tall, erect and vigorous, 2½ ft. and more in height. They should be staked or given some other form of support.

Seeds sown in early spring outdoors will furnish heads in summer while sowings made in midsummer will provide for a late summer and fall crop. For the earliest crop, sow the seeds early in hotbed or house; transplant the young plants to the garden when soil has become warm. A pkt. will produce about 250 plants; an oz. 3000.

157 Calabrese 85 days. The central large, cauliflower-like head of bluish green flower buds grows 5 or 6 in. in diameter and after being cut numerous smaller heads appear on the side branches over a long period. Keep green sprouts cut off before the flower buds open.

Pkt. 15¢; ½ oz. 35¢; oz. 60¢; ¼ lb. \$1.75

156 De Cicco 78 days. Very similar in every way to Calabrese but ready a week earlier. Recommended highly for home and market.

BRUSSELS SPROUTS

158 Long Island Improved 120 days. Grown extensively on Long Island for the New York market and the most satisfactory variety for use throughout the U. S. Compact plants, 20 in. tall, with solid, round, cabbage-like sprouts measuring 1¼ to 1½ in. in diameter with a more delicate flavor than cabbage. This is a splendid vegetable.

Brussels Sprouts are easy to grow. In the South, seeds may be sown in the spring; elsewhere, sow seed thinly in a specially prepared seedbed or coldframe before midsummer, allowing plenty of time for sprouts to mature before hard frosts; light frosts seem to improve the flavor. In about 30 to 35 days after the seed is sown plants should be big enough to transplant to the garden. Set them 18 in. apart in rows 3 to 4 ft. apart. The "sprouts," dark green, tightly folded, cabbage-like heads, appear along the central stalk at the joints of the leaves and appear first at the bottom of the plant. Therefore, the lowest sprouts on the plant should be picked each time, after which break off the leaves below the sprout to make further picking easier but do not remove the top leaves. Becoming more popular in home gardens. Suitable for freezing. A pkt. will produce about 250 plants; an oz. 3000.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢; ¼ lb. \$2.70

CHICORY—Delicious, appetizing salad

297 Witloof (French Endive) 110 days. A choice salad delicacy for fall and winter. Sow seed in the spring. In early fall, cut off foliage 1 in. above soil level, cover with 8 to 10 in. of soil and keep in place with boards set along the sides for three or four weeks when a pure white blanched stalk should be ready. Cut off about 1 in. above the top of the root and repeat as above for a second crop, or if wanted during the winter in cold sections, dig the roots, store for a few days in a shed or pit so they may become thoroughly chilled, then place upright in boxes and cover with 10 in. of sand, light soil or peat moss. Water and keep in a warm place indoors. In about a month, the sprouts should break through the surface and be ready for use as a tasty salad.

Pkt. 15¢; ½ oz. 45¢; oz. 80¢

COLLARDS—One of the best boiling "greens"

299 Georgia 80 days. Burpee Hybrid Cucumber®

ORIGINATED ON BURPEE'S FORDHOOK FARMS

Enthusiastic comments from home gardeners, commercial growers and experiment station trials throughout the country, show the Burpee Hybrid Cucumber, like hybrid corn, to be more vigorous growing and more productive than any of the best standard varieties.

The report of Michigan State College on slicing cucumber trials last year shows Burpee Hybrid far exceeded all open pollinated varieties tested in pounds of fruits harvested per hill, double to four times as much, depending on variety.

Burpee Hybrid

60 days. High resistance to mosaic and downy mildew are the outstanding attributes of this true first generation hybrid white spine, slicing type cucumber. Vines are extremely vigorous, long lived and bear an abundance of well-formed green fruits of handsome appearance, 8 in. and more long, 2½ in. wide, square at both ends with medium seed cavity and crispy, white flesh of excellent quality. Burpee Hybrid Cucumber outyields open pollinated varieties because the vines continue to produce their fruits most profusely for a long time after the others have ceased.

Burpee's CUCUMBERS

May be harvested at almost any age depending on what purpose the fruits are intended. Different sizes may be picked at the same time, small ones for sweet pickles, larger ones for bread and butter pickles, slicing or dill pickles. Many gardeners prefer to plant the larger fruited varieties for table use and the so-called pickling types

and gherkins for relishes or pickles. If you have had poor success with cucumbers in the past, plant Burpee Hybrid listed on page 77. Letters from customers all over the country acclaim it as outstanding for yield, quality, color and disease resistance; many tell us we are too modest in our description. It is truly a top-notch.

Burpee's Sunnybrook

374 Burpee's Sunnybrook ☉ — *Our extra dark streamliner for all purposes*

Fruits are 9 to 11 in. in length and 2 to $2\frac{1}{2}$ in. in diameter when mature, tapering symmetrically toward either end; flesh is firm and thick, with few seeds which form late in the season so that the fruits are edible over a longer period than most varieties. Its firmness and the extremely dark color of the skin are maintained for a long time after picking. Pkt. 25¢; oz. 50¢; $\frac{1}{4}$ lb. \$1.35; $\frac{1}{2}$ lb. \$2.40; lb. \$4.25

All cucumbers listed on the two previous pages and above, with the exception of Improved Long Green, are white-spined; pickling cucumbers, offered below, belong to the black spine group.

How to Grow Cucumbers

Make your first sowing of cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing 4 or 5 weeks later to furnish cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure or organic matter dug into the soil where seeds are to be planted and side-dressings of commercial fertilizer after the plants have begun to grow are beneficial.

Plant in groups 4 to 5 ft. apart, placing 8 to 10 seeds in each group, and cover with ½ in. of soil. When plants are 6 to 8 in. high, thin to 3 or 4 plants to a group. A pkt. of seed will plant 15 groups; 1 oz. 50 groups or so-called "hills." Seeds may also be sown in rows 4 to 5 ft. apart, 4 to 6 in. apart in the row; later thin the plants to stand 12 in. apart in the row. To save garden space and make for easier gathering, cucumbers may be grown on a fence or trellis.

Don't forget to plant dill seed. The dry or green branches and the dried seeds are prized for flavoring pickles. Dill is listed on page 81.

Burpee's EGGPLANT

May be cooked in various ways. The fruits are at their best edible stage when the skin has attained a high gloss. Use when young, at which time the seeds will be small and hardly noticeable. Keep fruits picked off as they become ready and plants should bear until frost. A rich, sandy, warm soil produces the best plants and yields the highest number of fruits. Seed should be started in a hotbed, or indoors in shallow boxes or seed-pans, 8 to 9 weeks be-

fore the time to set the plants out in the garden. When seedlings are about 3 in. high, plant singly into small pots, setting the plants in the open when all danger of frost is past and the soil has become thoroughly warm. A pkt. of seed will produce about 100 plants; 1 oz. 2000 plants. Days mentioned in descriptions represent the average time required from the setting of the plants in the garden until the first fruits are ready for table use.

Burpee's CELTUCE Combines the uses and flavors of CELery and LetTUCE

290 Burpee's Celtuce belongs to the lettuce family but is entirely different in its growth and uses. When plants are young, the leaves may be used as lettuce or as boiling "greens," but its chief value is its central stem or stalk. Whether celtuce stalks are to be eaten raw or cooked, you remove the lower leaves and then cut off all the outer skin and fibrous layers down to where they become light green and tender. Cooked celtuce stalks have a pleasing, mild flavor suggestive of celery. Young leaves have four times the vitamin C content of head-lettuce leaves.

How to Grow Watermelons

Plant seed after all danger of frost has passed and the soil has become thoroughly warm. Place 6 to 8 seeds in groups, allowing 2 to 3 in. between the seeds and space the groups 6 to 8 ft. apart each way. Cover seed with ½ in. of fine soil. Thin to 2 or 3 plants in each group after plants are well established. Rich, rather sandy soils produce the finest watermelons, but a well-drained loam is also suitable. A pkt. will plant 6 groups or so-called "hills"; 1 oz. about 30 groups.

MUSKMELONS (CANTALOUPE)

To really enjoy a muskmelon, fruits should be allowed to fully ripen on the vine for, with the exception of Honey Dew, they do not become sweeter in flavor after being picked. Fruits are ripe when the stem, attached to the melon, will slip from it with a slight touch of the thumb. If the stem does not slip off easily, the melon is not ripe and should remain on the vine. Many persons can select ripe melons by their aroma. We offer the best varieties.

How to Grow Muskmelons

The most suitable soil is a rich, warm, sandy loam. Sow the seed after the ground has warmed up, putting 8 to 10 seeds in groups, allowing 2 to 3 in. between the seeds and cover with 1 in. of fine soil. The groups should be spaced 4 to 6 ft. apart each way. Thin to 2 or 3 plants to a group after the plants are well established. Well-rotted manure dug into the soil where seeds are to be planted and side dressings of commercial fertilizer after the plants have begun to grow are usually beneficial. A pkt. will plant 12 groups, 1 oz. 50 groups or so-called "hills", —a term that is misleading to many gardeners.

ONION and GARLIC SETS

Orders for Onion and Garlic Sets cannot be accepted after May 1

It pays to plant Burpee's sets of the best quality which are produced under ideal conditions from a select strain of seed, carefully screened and stored at the proper temperature until they are sent to you. One lb. of onion sets will plant 50 ft. of row.

Onion and garlic sets should be planted as early in the spring as the soil can be worked. Short cultural directions are given below; full directions are sent with every order.

Because of State law, we regret we are unable to ship onion sets to California.

Sweet Spanish

Burpee's ONIONS

For flavoring salads, raw or cooked vegetables, soups, sauces, stews, etc., or served as a separate vegetable, onions are universally popular. A large selection of varieties from which to choose—round or flat in shape, mild or fairly strong in flavor, and white, yellow or red colored skin although the flesh of all is white. For green onions or large onions, you have your choice of sowing seeds or planting sets. You may pull green onions as needed before the bulb enlarges or large onions after bulbs are formed. Fully matured onions may be kept for winter storing. Some varieties are better than others for this purpose as explained in the descriptions.

682 Sweet Spanish ☉ UTAH STRAIN

110 days. Very large, globe-shaped, exceptionally mild, fine grained and sweet—excellent when cooked or for use in salads or other ways without cooking. They are remarkably uniform, have light yellow skin and pure white, firm, crisp, tasty flesh. Under proper growing conditions, will measure 4 to 6 in. across. Although onions of this type will not keep as long in storage as Yellow Globe Danvers, Southport, or Ebenezer, Utah Sweet Spanish will stand shipping and storage for short periods better than Prizetaker, Gibraltar or the Bermuda varieties. In northern states, and sections where summers are short, seed is usually started early.

Evergreen Bunching

How to Grow Onions from Seed

Sow seed as early in the spring as the ground can be worked, in rows 1 to 1½ ft. apart. Cover the seed lightly. The soil best suited to grow onions is one that is reasonably fertile, well drained, and well prepared. If fully matured onions are wanted, thin the seedlings when 3 to 4 in. tall, to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. Store in a dry, free-from-frost place over winter. A pkt. of seed will sow about 20 ft. of row; 1 oz. 200 ft. See page 89 for How to Grow Onions from Sets; we offer both the white and yellow.

Wrinkled-Seeded Early PEAS

Burpeeana Early Dwarf

Wrinkled-seeded peas, both early and main crop varieties, are favored by many home gardeners, as well as market growers and canners, because of their extra sweetness and better quality. Contrary to popular belief, they can be planted as early as smooth-seeded varieties—as soon as soil can be prepared, but do not sow in cold, wet ground. They grow best when weather is cool.

744 Burpeeana Early Dwarf ☉ — *New*

63 days. Burpee's new, extremely prolific, high quality pea for the home garden, market grower, shipper, canning and freezing. Vines grow 18 to 24 in. tall and bear many pods, 3 to 3¼ in. long, straight, slightly curved at tip and tightly filled with 8 to 10 medium to large size, sweet, tender peas of excellent quality. Retain color and flavor when quick frozen. Experiment stations throughout the country report most favorably on trial plantings of Burpeeana Early Dwarf. It is a "must" for your 1949 garden; be sure to try it.

Pkt. 25¢; ½ lb. 55¢; lb. \$1.00; 2 lbs. \$1.90

753 Little Marvel ☉ — *Heavy yielder*

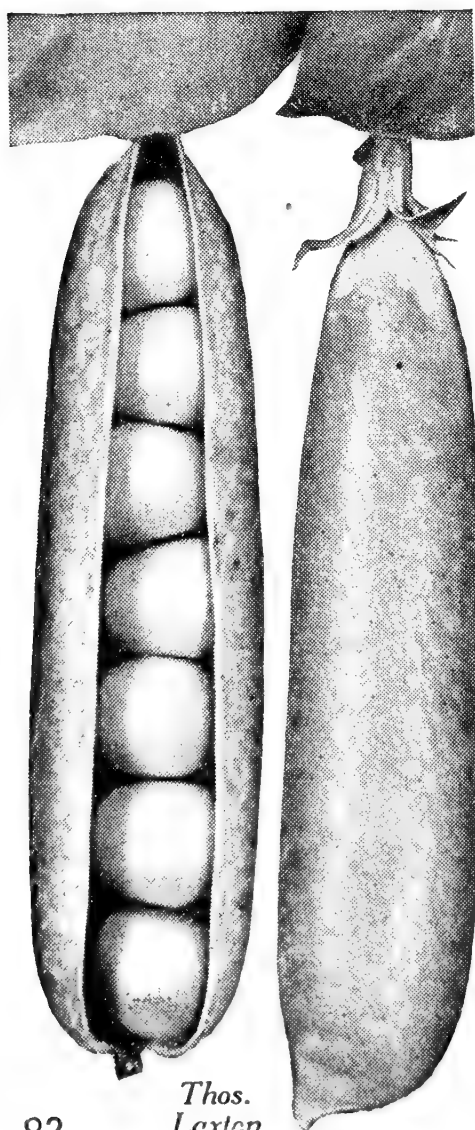

63 days. The 18 in. vines bear a heavy crop of dark green, nearly round, square-ended pods, 3 in. long, which are tightly packed with 7 or 8 large, deep green peas of the most delicious flavor. Heavy yield, high quality, attractive appearance and good carrying ability all combine to make Little Marvel a most desirable early wrinkled-seeded pea for home, market and freezing. We recommend it for use wherever peas can be grown.

63 days. Vines grow 2½ ft. tall, are resistant to fusarium wilt and bear a big crop of dark green, blunt pods, 3½ in. long, filled with the most luscious deep green peas whose tender, clinging skin does not peel or loosen in freezing. It is for this reason that it is named "Freezonian." Although it is most excellent for quick freezing, it is just as valuable for the home and market gardener.

Smooth-Seeded Early Peas

Smooth-seeded peas are valuable for earliest crop, high yield and general hardiness. Seeds should be sown as early in the spring as ground can be worked as they do best when soil and weather are cool. Further cultural directions are given on the next page and on the packages containing the seeds.

735 Mammoth Podded Extra Early Ⓞ—Medium-tall grower

60 days. Valuable large-podded, smooth-seeded, extra-early pea, adapted to home and market because of early maturity and large yields. Pods are broad, round, blunt, 3 in. long, medium green and contain 6 to 8 large peas of fine quality. Vines grow 30 in. high and freely produce their pods for a number of days. Such large pods and tall vines are usually found in later maturing varieties. Young, fresh peas are truly delicious. Pods taper slightly from blossom to stem end.

To enjoy the sweet, delicious flavor of peas, pick pods before they become fully developed and while still green; then cook as soon as possible, because they lose flavor, sweetness and quality rapidly after picking, the sugar changing to starch. Grow your own and get the real, sweet flavor of garden fresh vegetables at their very best.

How to Grow Peas

Peas make their best growth during cool weather so that the first planting of seed should be made as early in the spring as the soil can be worked. Sow an early variety two or three times at 10-day intervals or choose from the smooth-seeded early, wrinkled-seeded early and main-crop varieties. Sow again in late summer for a fall crop. Planting space available more or less governs the number of sowings and the choice between tall and dwarf varieties. Peas are usually planted in double rows 3 in. apart, the seeds dropped 2 in. apart and covered with 1 to 2 in. of soil. Double rows should be spaced about 2½ ft. apart. For best results, provide supports (wire, brush or string) for the tall-growing varieties to climb upon. A pkt. will sow 20 ft. of single row; 1 lb. 100 ft.

EDIBLE-PODDED or SUGAR PEAS

PODS ARE COOKED LIKE SNAP BEANS

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. When young the pods are cooked like snap beans; the peas are not shelled. At this stage, pods are stringless, brittle and succulent. Should pods develop too fast for use as snap beans, seeds may be eaten as shelled peas and are of the best flavor before they have reached full size. The following varieties are entirely free of fiber or parchment. Vines of the taller growing varieties should be given support of string or brush to climb upon for best results.

SPINACH

One of our most wholesome "greens" in the spring and early fall when cool weather is most favorable for its growth. Also suitable for quick freezing. The New Zealand Spinach will supply delicious "greens" throughout the summer and fall. It withstands heat, as does Swiss Chard and Tama-pala. Why not plant some of each class to supply you with vitamin-rich fresh "greens" throughout the season; canned or frozen for use during the winter? The number of days from sowing the seed until spinach is ready to use applies to spring plantings in vicinity of Philadelphia. The time varies in different sections and season when sown.

How to Grow Spinach

Sow seeds very early in the spring, either broadcast or in rows 18 to 24 in. apart; cover the seed with 1 in. of soil and thin plants to stand 5 or 6 in. apart in the rows. At each picking, remove every other plant, which will allow room for remaining plants to fully develop. Additional sowings may be made when the preceding planting is up and growing, but the last should be two months before hot weather is expected. For fall use, sow in late summer; for early spring use, where winters are mild, sow in early fall and cover with a few inches of hay, leaves or litter. A pkt. will sow 25 ft. of row; 1 oz. 75 ft. Directions for growing New Zealand spinach are given on the seed bags.

How to Grow Pumpkins

Plant 5 or 6 seeds in groups 6 to 8 ft. apart or drop seeds in every fourth group or so-called "hill" in the corn-patch when soil has become thoroughly warm. Cover seed with 1 in. of fine soil. After the seedlings are well started, thin out, leaving the best two plants in each group. A pkt. of seed will plant about 5 groups; 1 oz. 25 groups.

Burpee's Earliest RADISHES

Burpee White — Outstanding for flavor

888 Burpee White ☉ — Distinctive

25 days. Exceptional tenderness, mild flavor, crispiness, and remaining long in edible condition, are most outstanding qualities of this white radish introduced by us in 1947.

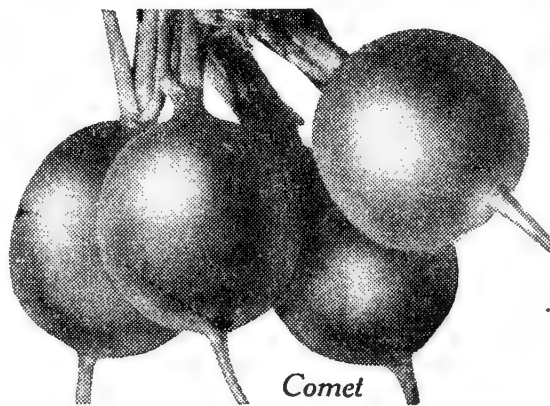

Burpee White Radishes, when young, are nearly round, juicy and sweet with pure white skin and flesh. Roots become flattened in shape as they grow, the diameter increasing with age. Best eating stage is when they measure $\frac{3}{4}$ to 1 in. across. Grown from spring sown seed, they are still crisp, mild and tender when 2 in. in diameter.

Pkt. 25¢; oz. 50¢; $\frac{1}{4}$ lb. \$1.50

890 Comet ☉ — Long standing

25 days. Bred to meet the increasing demand for an early radish that has the same good qualities as Vick's Scarlet Globe, but with a rounded instead of an olive-shaped root. Comet fills the bill; radishes are round, with an occasional olive-shaped, small tap-root; bright scarlet skin and tender white flesh which remains crisp and solid for a long time. Ideal for home and market gardens, both for field culture and greenhouse forcing. Eating and keeping qualities are surpassed by none.

Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢; $\frac{1}{2}$ lb. \$1.55

Comet

877 Burpee's Earliest Scarlet Button ☉

25 days. Perfectly round, bright scarlet radish, about 1 in. in diameter with bright scarlet, thin, tender skin and icy white flesh which is crisp and juicy. It has a mild, delicate flavor. Earliness, bright scarlet color, unusually brittle and delicious quality make it most desirable for home gardeners as well as the larger growers, either for growing outdoors or under glass; small tops are just right for bunching. Its size and color make it a ready seller. Retains its fresh appearance for a long time.

Pkt. 15¢; oz. 35¢; $\frac{1}{4}$ lb. \$1.00; $\frac{1}{2}$ lb. \$1.75

Radishes do best in loose, deeply prepared soil and when growth is quick and steady. Sow seed thinly to permit full development of roots.

Three Extra Fine Radishes

White Icicle (most popular long white)

Rapid Red (quick growing round red)

Sparkler (round scarlet-red, tipped white)

7015 — 3 Pkts., one of each kind, value 35¢ for only 25¢

878 Burpee's Rapid Red ☉

23 days. A radish everyone should plant; it is early, of fine quality, refined, smooth, attractive in appearance and pungent in flavor. Small, bright red and as round as marbles, $\frac{3}{4}$ in. in diameter, with thin, bright red skin. The flesh is pure white, crisp, and delightfully snappy. Tops are short, making it desirable for growing under glass. The quicker they are grown, indoors or out, the crispier their flesh and the more delectable their flavor. Invaluable for home and market.

Pkt. 15¢; oz. 35¢; $\frac{1}{4}$ lb. \$1.00; $\frac{1}{2}$ lb. \$1.75

883 Vick's Scarlet Globe

24 days. Olive-shaped, bright scarlet radishes, 1 in. in diameter. It is crisp and tasty, with fine white flesh and a medium-size top; right for bunching. Good for forcing and does equally well outdoors for either the market or home garden.

Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢; $\frac{1}{2}$ lb. \$1.55

886 Crimson Giant Globe

29 days. Differs from most others as the roots attain a large size without becoming hollow or pithy. The shape is a perfect globe, $1\frac{1}{2}$ in. in diameter, with thin, tender skin of deep crimson and solid white flesh which is firm, crisp and mild in flavor. Remains edible for a long time; in fact it performs better than others under high temperature conditions. Sow seed thinly to permit full development of the roots, and for the biggest radishes see that the soil is moderately moist, fertile and deeply prepared. Thin to a wider spacing than smaller varieties; we suggest leaving $1\frac{1}{2}$ to 2 in. between plants in the row for full development of large roots.

Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢; $\frac{1}{2}$ lb. \$1.55

893 Sparkler — Scarlet-red tipped white

25 days. Choice early variety that is a superior strain of the old Scarlet Turnip White Tip. Small round roots, $1\frac{1}{4}$ in. in diameter, with bright scarlet top, a clear white base, and small slender tap-root. The juicy flesh is pure white and of an agreeable snappy flavor. A very attractive radish for bunching or market; an excellent variety for the home garden, greenhouse and spring frame forcing. Fine contrast to the all-red varieties when displayed on market or roadside stands.

Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢; $\frac{1}{2}$ lb. \$1.55

If your garden includes some of each of the three different classes of radishes—earliest, summer and winter varieties—it will keep you supplied with this refreshing vegetable practically all year 'round. You have your choice of many kinds.

895 Cavalier

25 days. Roots are highly colored, oblong-globe shape, bright scarlet; firm, white flesh. The short tops make it especially suitable for growing on muck land as well as upland soil. Our strain of this important variety has been rigidly reselected and represents an elite stock suitable for use by the most critical home and market trade. Fine for forcing in frame or greenhouse. Holds its firmness for a long time. Superior quality and dependable performer. Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢; $\frac{1}{2}$ lb. \$1.55

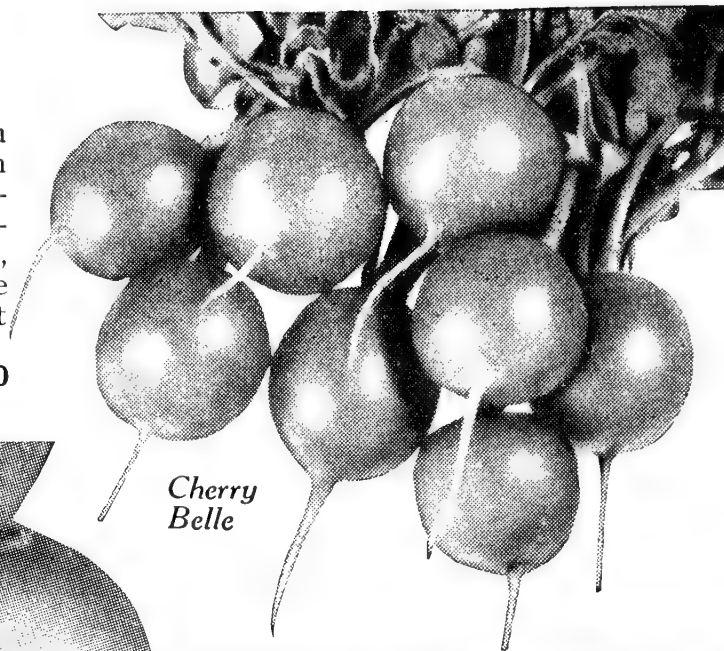

Burpee's Earliest Scarlet Button

887 Cherry Belle Radish ☉

New for 1949—All-America Winner

22 days. Round, smooth, red radishes resembling cherries in shape and color; flesh is white, crisp and firm. Roots retain their good eating qualities for a long time as they are exceptionally resistant to pithiness. This most valuable characteristic, together with an attractive color, as well as ideal shape, extra-early maturity, slender tap-roots and short tops make Cherry Belle a highly desirable radish for home use, market sales and forcing. At its best when sown in early spring.

Pkt. 25¢; oz. 50¢; ¼ lb. \$1.50

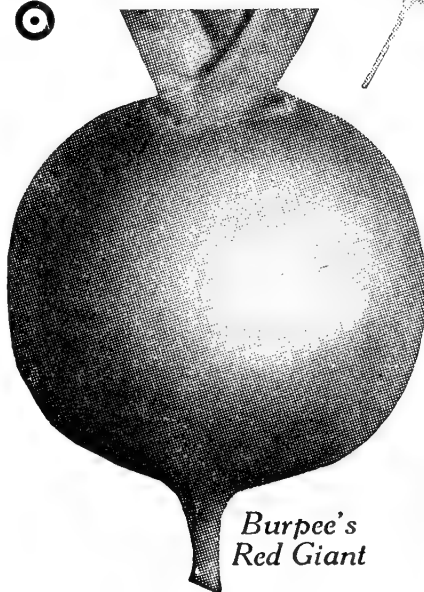

Cherry Belle

910 Burpee's Red Giant ☉

29 days. This remarkable radish combines large size with tender crispness and mild flavor. The roots, even though they grow to the enormous size of 1½ in. in diameter, are as crisp as ice if grown quickly. The skin is bright scarlet-red; the flesh is pure white. Grows to perfection in rich, loose, well-prepared soil. Pick Red Giant when ½ in. in diameter or ten days later when roots measure 1½ in. or more—it's always crisp, sweet and tender. An ideal home garden variety and may be used by truckers for bunching.

Pkt. 15¢; oz. 45¢; ¼ lb. \$1.25; ½ lb. \$2.25

907 French Breakfast

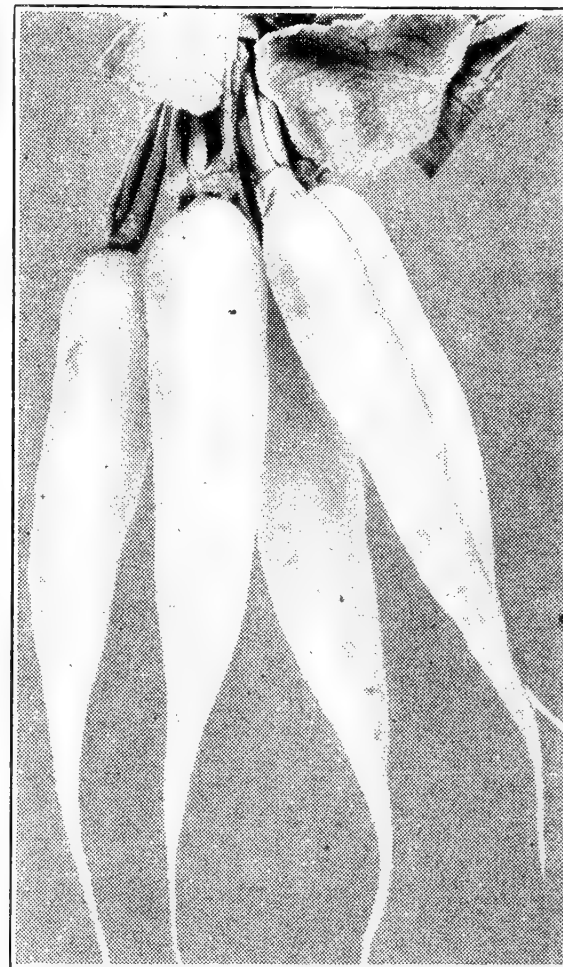

23 days. Oblong or deep olive-shaped, 1¾ in. long and ¾ to ¾ in. wide. Bright rose-scarlet skin, shading to clear white in the lower portion. The flesh is white, firm, and crisp; juicy, mildly pungent and tender. Quick grower; exceedingly popular for home, market and forcing. Tops are very short, radishes show partly above ground.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢; ½ lb. \$1.55

938 White Icicle ☉ —Most popular of all long radishes

28 days. Skin is pure white, thin and tender; flesh is icy white, crisp, juicy, perfectly mild and of a delightfully sweet flavor with just enough pungency to appeal to the appetite. Remains solid, being fully as good when 1 in. across as when only ½ in. The roots grow 5 in. in length and are the shape of an icicle, straight and free from side roots. Splendid for either spring or fall use whether for home or market. Thorough and deep soil preparation is advisable to secure well-formed, uniform roots. It is suited for forcing.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢; ½ lb. \$1.55

White Icicle Radish

928 Early Long Scarlet Short Top

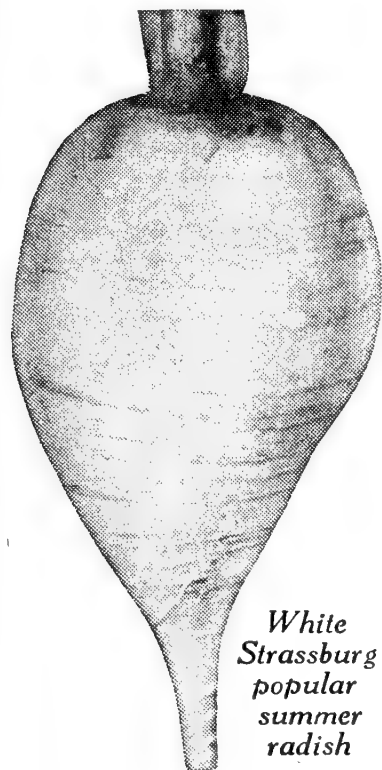

30 days. The very best long, brittle, red radish, rather slim, tapering, 5 to 6 in. in length. Skin is an attractive bright scarlet-red; the tender flesh is icy white and of the finest flavor, somewhat more pungent than Icicle. Grow partly above ground which makes pulling easy. Recommended for home and market gardeners desiring a long red radish. Ours is a carefully selected strain.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢; ½ lb. \$1.55

Midseason or Summer Radish

959 White Strassburg 40 days. Roots are 4½ to 5 in. long and 2 in. in diameter at the shoulder, tapering gradually towards the small tap-root. Skin is white and thin; flesh is mildly pungent, white, crisp, tender and of an icy texture. Widely grown for home garden use and by market gardeners in some sections for local sales. Become ready to use when the others are gone. As they grow more slowly, they endure heat better and are valuable for summer use. We suggest a deep and thorough preparation of the soil to obtain the best roots. Remains long in good condition.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢; ½ lb. \$1.55

White Strassburg popular summer radish

How to Grow Radishes

Sow the seed of the earliest and midseason radishes as early in the spring as the ground can be worked, in rows 12 to 18 in. apart, covering ½ in. deep. Thin to stand 1 to 2 in. apart in the row. Make additional plantings when the preceding planting is up and well started; these may be made until early summer, then resume one month before frost. Seed of winter radishes is sown in the summer for fall and winter use. A moderately light soil produces the smoothest and best roots. A pkt. will sow about 20 ft. of row; 1 oz. 100 ft. When sowing beets, carrots, parsley and parsnips, mix in a few radish seeds to mark the rows where the slower-growing vegetables were sown.

Winter Radishes

These require cool weather at the finish of their growing season. Sow seed in early summer for fall use; in midsummer for late fall and winter. By storing roots in moist sand in the cellar, fresh, crisp radishes may be had during the early winter. We offer 3 best kinds. Give plants plenty of room by thinning out when young to stand 3 in. apart.

967 Chinese Rose or Scarlet China 55 days. Oval-shaped, 5 to 6 in. long and 2 in. in diameter. Skin deep rose, white tip. Flesh pure white and mildly pungent. Excellent for bunching or storage as it is a fine winter keeper.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢; ½ lb. \$1.55

971 Long Black Spanish 60 days. Black-skinned with pure white flesh, crisp, solid and pungent; 7 to 10 in. long and 2 to 3 in. thick, nearly the same size at the bottom as the top.

Pkt. 15¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.75

963 White Chinese or Celestial 60 days. Smooth, pure white roots, 6 to 8 in. long, with a diameter of 3 in. Flesh is crisp, juicy, icy white and of mild flavor—the least pungent of all winter radishes. They remain succulent for a long time.

Pkt. 15¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.75

Summer SQUASH

In descriptions, we give the average size of fruits when fully grown. For the best eating, summer squashes are used when immature, usually when very small; in fact, Early White (Scallop or Patty Pan) is delicious if cooked whole when very tiny—an inch or more across. Bush varieties take up little room and are especially adaptable for the small garden; running varieties need plenty of room for the vines to ramble over the ground. They may, like pumpkins, be planted among the corn, allowing 8 to 12 ft. of space for each group. See cultural directions on the next page for summer as well as winter squash, bush and running varieties.

Fall and Winter SQUASH

These produce large hard-shelled fruits which are grown to full size and may be stored for use during the winter. Valuable for baking, boiling, making pies, etc. Many of the varieties here listed make excellent "pumpkin" pie and some are canned extensively for that purpose. Unlike summer squashes, fruits of the fall and winter varieties must remain on the vine until fully matured; gather them before frost, leaving part of the stem attached to the fruit. Handle carefully and avoid bruising. Easily stored in any dry place. Keep best if temperature of 70 to 75° F. is maintained for a week or two after which it should be held at 45 to 50° F.

How to Grow Squash

Summer Squash. Sow seed after all danger of frost has passed. Put 5 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups of bush varieties 4 ft. apart each way and those of the running kinds either 8 by 8 ft. or 10 by 12 ft. apart. Thin bush varieties so that 3 or 4 of the strongest plants remain in a group; running varieties allow 2 or 3 plants to a group. A pkt. will plant 8 to 10 groups; an oz. 30 to 40 groups.

Winter Squash. Sow seed in the same way as given above for the running varieties of summer squash; 4 seeds in a group is sufficient. A pkt. will plant 6 to 8 groups; 1 oz. 20 to 30 groups. All varieties of squash grow best in a fertile, deep soil.

Burpee's SWISS CHARD

"Cut and Come Again" vitamin-rich, crisp leaves; stands hot weather; abundant, continuous yielder

Leaves are cooked and served like spinach and the mid-ribs like asparagus, or both may be cooked together. Leaf-stalks make delicious fritters. Cutting may be done by stripping or removing outer leaves of various plants, thus allowing the center and remaining leaves to grow, or entire plants may be cut off a couple inches above the crown and new leaves will be produced. A healthy and nutritious vegetable.

153 Burpee's Rhubarb Chard Ⓞ

60 days. A Swiss Chard that looks like rhubarb. The leaf-stalks, considered by many as the most delicious part of the chard plant, are bright but delicate, translucent crimson; the rich color extends out through the veins into the dark green, heavily crumpled leaves. Easily grown, thrives everywhere. You will enjoy the different, tasty, delicious flavor of Burpee's rhubarb chard. Whether you cook the leaf-stalks alone, use only the leaves, or cook both together, you will find a sweetness you never knew existed in a leafy vegetable. Leaves and stalks are nice when used in flower arrangements; they keep fresh for a long time in water. We offer an outstanding, reselected, colorful strain.

Burpee's Rhubarb Chard

How to Grow Swiss Chard

Sow seed any time from early spring until midsummer in rows 18 to 30 in. apart; cover with ½ in. of soil. When seedlings are 3 to 4 in. high, thin 8 to 10 in. apart in the row. The plants are quite hardy and will yield throughout the summer and fall until frost. All chards are suitable for freezing. They yield heavily wherever beets can be grown. A pkt. will sow 25 ft. of row; an oz. 100 ft.

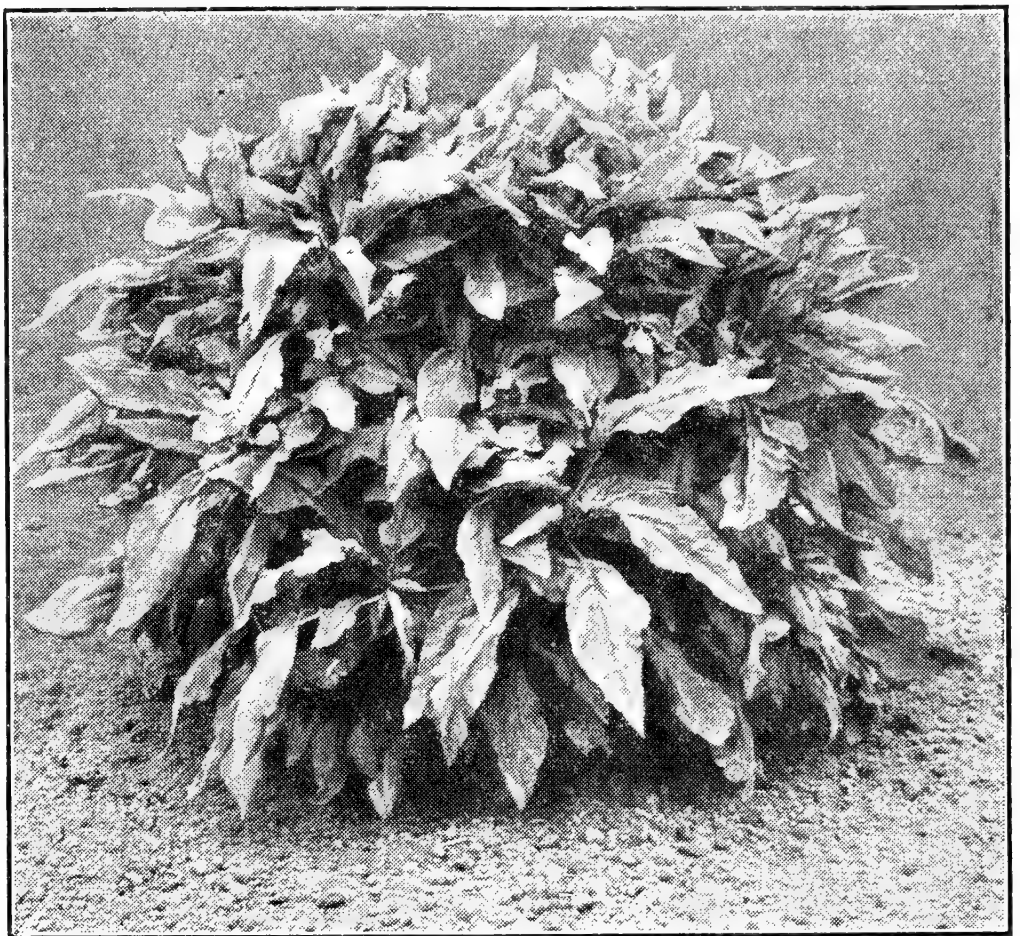

A pleasing change from other "greens" **TAMPALA**

BETTER THAN SPINACH—STANDS HOT WEATHER

Tampala, as a cooked, canned or quickly frozen green, is, in the opinion of many, far superior to spinach or Swiss Chard. Its color is more appetizing, its flavor more delicious, shrinks very little, holds its color better, and requires less cleaning and washing when preparing the leaves because they are smooth, not savoyed.

Tampala is a so-called hot-weather plant doing best when days are long. Seed, then, should not be sown until the ground has become warm. Within 6 to 8 weeks from sowing, Tampala is ready to use when the entire plants make the most delicious "greens," either eaten raw as a salad or cooked as you would spinach. For a continuous supply of the most tender leaves, make several successive sowings 10 days to 2 weeks apart and use young plants when 6 to 10 in. tall. However, a plant may be left every 2 ft. and leaves picked as they mature. So tender are the leaves that they require only 5 minutes to cook with just the water that clings to them when washed. Stems are cooked like asparagus for 8 to 10 minutes or a little longer, depending on size; they have a flavor suggestive of artichokes.

Tampala is a horticultural variety of *Amaranthus gangeticus* L.

Burpee's Hybrid Tomatoes

ALL CREATED ON BURPEE'S FORDHOOK FARMS

Unsurpassed for quality, uniformity and yield. Every seed from a hand pollinated fruit.

New Giant Hybrid Tomato

1131 BURPEE'S BIG BOY

Shown in color on back cover

78 days. New, altogether different, first generation (F₁) hybrid; a splendid companion to our Burpeeana, Fordhook, Clinton and Burpee Hybrids. Big Boy is at its peak of performance in midseason, when many standard varieties decline in yield and size of fruit.

Plants are very large, extremely vigorous, semi-upright to spreading in habit; moderately dense dark green foliage protects the fruits from sun-scald.

Well grown fruits are extra large, average 10 ozs. with some weighing 1 lb. or more. Unlike other large fruited varieties, Big Boy tomatoes are perfectly smooth, deep globe to deep oblate in shape and very firm; scarlet-red skin, thick walls, with bright red meaty flesh of fine flavor and excellent quality. An ideal hybrid for the home garden and market grower, especially roadside sales.

The picture gives you some idea of the height of a staked plant, the size of the tomatoes and the quantity of fruit produced. Because of the extra strong, thick, sturdy, strong stemmed growth, be sure to provide tall, strong poles, preferably rough, to better hold string or other material used to tie up the plants.

IMPORTANT—PLEASE READ

HYBRID TOMATOES

Hybrid Tomatoes are strong, vigorous growers and outyield regular varieties, the extra quantities coming, in large measure, from the soil. It can be readily understood that because Hybrid Tomatoes have the ability to produce larger plants and higher yield they must be fed more than standard tomatoes. Therefore, to produce a maximum crop of large fruits, we recommend that you maintain good fertility and moisture in your soil. For this purpose, it is desirable to make your fertilizer application at the time of planting and, if possible, cover the ground around the plants with well-rotted manure when plants begin to bloom or set their first fruit.

If you stake your plants, train them to a single stem and pinch off side shoots when very small. These side shoots develop at the joint where a leaf joins the main stem. Keep a close watch for such shoots as it takes only a few days for them to grow into a branch of good size, when they are more troublesome to remove.

The new giant hybrid, Big Boy Tomato, and Dr. Oved Shifriss who developed it on Burpee's Fordhook Farms.

How to Grow Tomatoes

Sow seed in a hotbed, or in a shallow box in the house, allowing 6 to 8 weeks to produce plants large enough for setting outdoors when weather becomes warm. When plants are about 2 in. tall, transplant to stand 4 in. apart each way, or pot singly in 3 in. pots. Plant outdoors when all danger of frost is past. Where summers are long, seed may be sown directly outdoors when soil and weather get warm. When plants are large enough to transplant, set them where they are to remain; such plants will come into bearing later than those started earlier indoors or in a hotbed. A pkt. of standard tomato seeds will produce about 200 plants; 1 oz. 2000. Days to maturity given in the descriptions are from field setting of the plants until first usable fruits are ready. Plants should be moved with a minimum of disturbance to the roots when transplanting or setting out in the garden.

1133 BURPEEANA EARLY HYBRID

58 days. Distinctly different extra early, true, first generation (F₁) hybrid tomato created at Burpee's Fordhook Farms, to offset the usual shortcomings of many of the open-pollinated early varieties. Fruits of Burpeeana Early are of an attractive, deep globular shape, medium size, smooth, firm, rich scarlet, average 5 ozs. in weight, and are borne profusely in clusters of from 5 to 8. At Fordhook Farms, Burpeeana Early produced the highest early yield of all varieties in our testing grounds. Quality is excellent; flavor is mild.

Plants are of spreading habit with plenty of foliage to afford protection from sun-scauld. Adapted to staking. Valuable early tomato for the home garden; profitable for early market. *Shown in color on the inside back cover.*

Fruits are medium to large, firm, thick walled, average 8 ozs. in weight, deep globular in shape, scarlet-red in color; flesh is meaty and of excellent quality. "—The Burpee Hybrid Tomatoes I planted last season produced many more and finer tomatoes from fewer plants than I ever grew from twice the number of plants of regular tomatoes. . . ."

F. P. Campbell, Millersburg, Pa.

"—I have grown tomatoes for market and for home use for over 40 years, but this year I have grown the best ever in every way. The Burpee Hybrid has everything—color, firmness, flavor and immense size. I pruned my plants to one stalk and six blossom trusses. This gave a great yield of superlative fruits. The Burpee Hybrid should become an outstanding member of the tomato family. . . ."

Rev. P. A. Arnold, Richmond, Mich.

"—From 140 plants of Burpee Hybrid and Clinton Tomatoes, pruned to one stalk, I harvested, and sold, up to the present date, September 7th, 800 pounds of extra fancy fruit; and also used everything I could for home consumption and canning. Both of these hybrids are remarkably free from disease. The color and shape are ideal for market, ranging in weight from 8 to 15 ozs. . . ."

F. V. Gonzalez, Sioux City, Iowa

"—Seed of the Burpee Hybrid Tomato planted February 22nd, 1948; plants transplanted into pots, March 21st; potted plants set into garden, April 25th; picked first ripe tomato, June 3rd; on July 7th there had been 24 fine ripe tomatoes picked, and there were 78 tomatoes still on the plant. These tomatoes at ripening time are never smaller than door knobs and will usually be about 3 in. in diameter; of course, some larger. We raise plants for sale, specializing in tomatoes. One of our good customers, Fritz Koch, had to be "talked" into taking one plant to try them out, but he is now a very much "sold" hybrid man. . . ."

The Townsend Greenhouse, Burlington, Kansas

"—Mr. Koch and I have been delighted with the results from the Burpee Hybrid Tomato plant which we purchased from the Townsend Greenhouse. . . ."

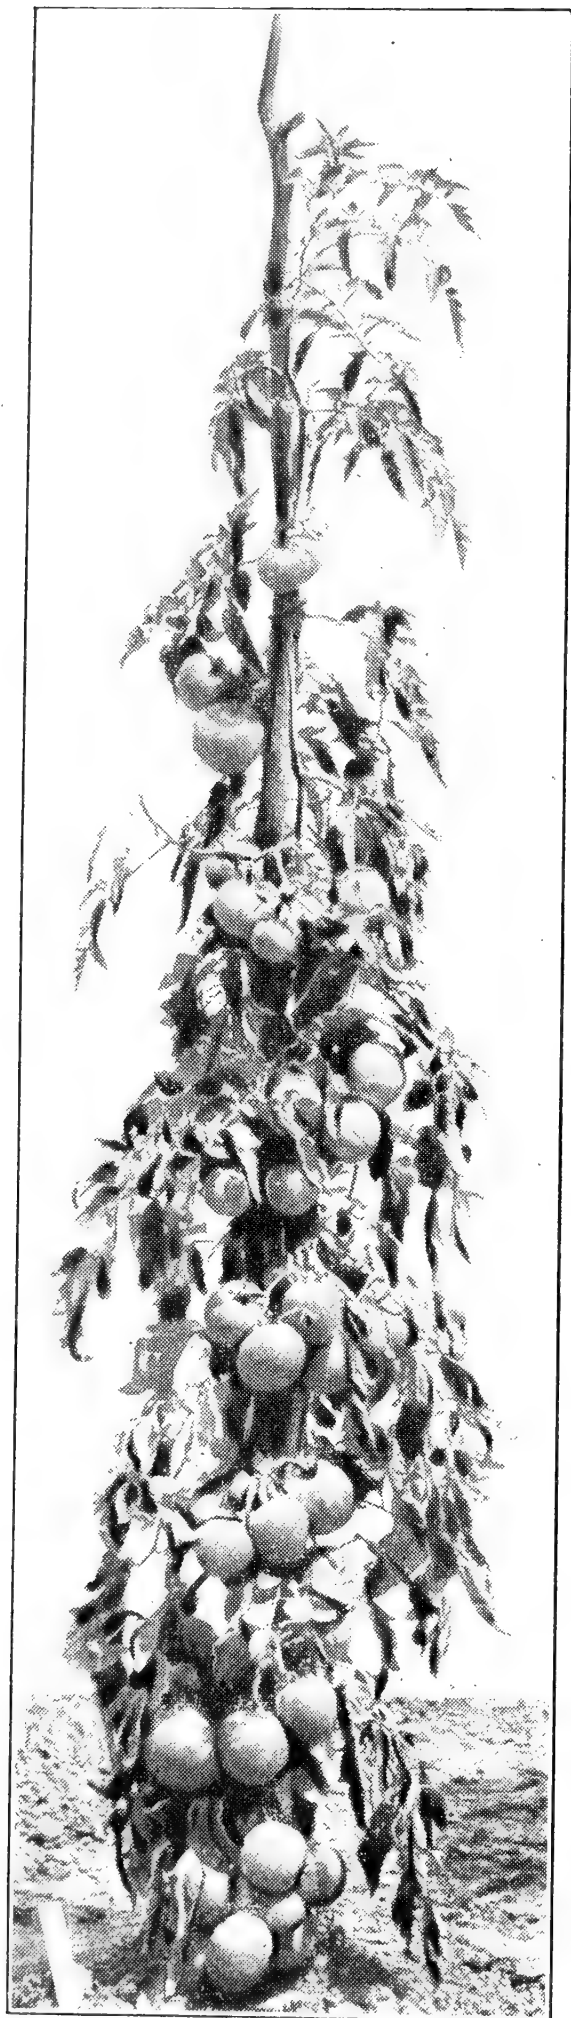

Mrs. Fritz Koch, Burlington, Kansas

1135 CLINTON HYBRID

75 days. Burpee's highly prolific, true, first generation (F₁) hybrid, main-crop, all-purpose tomato which has proved very satisfactory in many sections even in the Middlewest. For that reason, we named it Clinton in honor of Clinton, Iowa, Burpee's Western Headquarters.

Plants are large, vigorous, with medium-dense, dark green foliage. Fruits are large, weigh about 8 ozs.; bright scarlet, globular-oblate in shape, with firm, meaty flesh of the most excellent quality.

Burpee Hybrid Tomato

WHY HYBRID VEGETABLES ?

It is a well-known fact that true hybrids grow faster than open-pollinated varieties, show more vigor, produce greater yields and often, over a longer period of time, bear a more uniform product and, very often, it is possible to incorporate into the hybrids resistance to a number of diseases. Many hybrids not only combine the best features of their parents but even far surpass the best that either parent has to offer.

Yellow Pear Tomatoes

Burpee's Jubilee Tomato

Orange skinned, orange fleshed

1111 Jubilee compares favorably with the best of the standard red varieties in shape, smoothness, quality and solidity. Entirely different from any yellow or orange tomato you have ever grown. Fruits are large, golden orange, deep-globular, heavy, full flavored and really delicious; the orange colored interior is modern, thick-walled, with few seeds. Most attractive when sliced and does not leak when cut. Makes delicious juice. Very high in Vitamins A and C. Nice if served alone or with red fleshed varieties. Being mild and free of acidity, they are preferred by many to the best red tomatoes. If you are one of the few who have not enjoyed the delicious flavor and good eating qualities of Burpee's Jubilee Tomato, an All-America Winner, be sure to grow it this year. A taste thrill is in store for you. Ready in about 72 days. **Pkt. 20¢; 1/4 oz. 50¢; 1/2 oz. 85¢; oz. \$1.60; 1/4 lb. \$4.75**

Burpee's Jubilee

Three of the Best Tomatoes for the Home Garden

Burpee's Sunnybrook Earliana, Burpee's Jubilee and Marglobe Certified

7038—3 Pkts., one each of these three varieties, value 50¢ for only 40¢

Sizes and weights of tomatoes

given in our descriptions are for the general field-run of fruits. Customers often write us that they have produced tomatoes bigger than we state they will grow. This is not surprising for with special care, proper fertilizing, watering, pruning, staking, etc., they may easily do better than we claim. This might readily apply to other vegetables, as well as tomatoes.

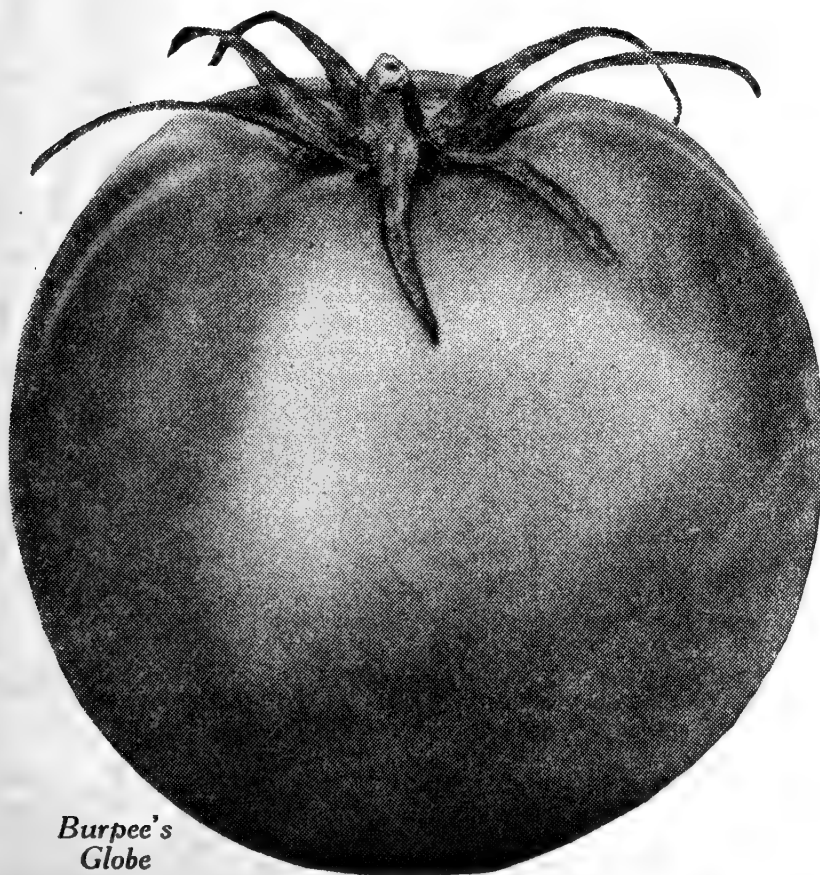

Pink Fruited Tomatoes

For years it has been customary to refer to the following varieties as pink fruited; the skin is really pinkish red to purplish pink. They are usually milder and more delicate in flavor than red fruited tomatoes.

1091 Oxheart—Extra large, deep fruits

86 days. One of the largest pink tomatoes ever introduced, great depth and very smooth. The oxheart shape of the pinkish red fruits is most distinct; interior is extremely solid with thick, firm walls and small seed cavities with few seeds. Primarily a home garden variety but readily salable on local markets and roadside stands.

Pkt. 15¢; 1/2 oz. 75¢; oz. \$1.40; 1/4 lb. \$4.25

Burpee's Oxheart

1092 Burpee's Globe —Extra choice

80 days. Decidedly distinct tomato of superior merit. The strong, healthy vines produce an enormous crop of uniform, medium to large size, rich, pinkish red tomatoes. The globe-shaped fruits grow in clusters of 6 to 10; solid, meaty, and free from any core. Contains little or no acid and is a shy seeder, the seed cavities being full of solid meat. Excellent for home and market garden where a main-crop pink tomato of solidity and quality with high yielding ability is desired. Adapted to pruning and staking as well as greenhouse forcing.

Pkt. 15¢; 1/2 oz. 60¢; oz. \$1.00; 1/4 lb. \$3.00

If you make your own tomato juice, try putting a sweet basil leaf in each quart of juice for additional flavor. Sweet basil is listed with other herbs on page 81. All herbs are easily grown.

1114 True Giant Ponderosa

83 days. Grow extremely large and are full of luscious, juicy flesh. The seed cavities are remarkably small, which accounts for the solid meat. It is not unusual for the tomatoes to weigh 24 ozs. and more, though the average runs around 9 ozs. They are deep and somewhat flattened. Persons who do not care for the acid flavor of the deep red tomatoes will find in Ponderosa a very palatable and tasty fruit of a delightful mild flavor. Essentially a home garden tomato although it finds ready sale on local markets. Fruits resemble Beefsteak in size and shape, but differ in color of skin—Beefsteak is scarlet-red while Ponderosa is purplish pink. Both are good eating.

Pkt. 15¢; 1/2 oz. 75¢; oz. \$1.40; 1/4 lb. \$4.25

Mulching tomato plants with a heavy layer of straw to retain soil moisture usually results in larger yields over a longer period of time, cleaner fruits, less cracking and less loss from blossom-end rot; it keeps down weeds, too, which is quite important.

Burpee's TURNIPS

At their best when growth is made during cool weather. Plant the Extra Early Milan varieties in the spring for their roots and the foliage types for their tops which are much used for "greens." Very popular for home garden, market, shipping, freezing and winter storing. The leading white fleshed turnip. Heavy cropper.

154 Broccoli Rapa

Also known as **Perennial Turnip**. Produces many small green heads which are cut while green with about 6 in. of stalk. One of the first vegetables to mature in the spring if seed is sown in late summer or early fall of the previous year. Tops and flower shoots are considered by some as superior in flavor to other turnip "greens."

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25

How to Grow Turnips

Sow the Milan and Foliage varieties in the spring as soon as the soil can be worked; space rows 12 to 15 in. apart. Thin seedlings to stand 2 to 4 in. apart in the row. For succession, make 2 or 3 sowings at two-week intervals. For fall and winter crop, sow in late summer in rows or broadcast about 3 months before your first expected hard frost. A pkt. will plant about 50 ft. of row; an oz. 250 ft.

RUTABAGAS or SWEDE TURNIP

Rutabagas require a longer season to mature than turnips and are best grown as a fall crop. Sow seed from early to late midsummer, in rows 15 to 24 in. apart. Cover with ½ in. of fine soil and thin the seedlings to stand 6 to 8 in. apart in the row. May be stored in a cool cellar or pit and used throughout the winter. The flavor of rutabagas is preferred by many to that of turnips. A packet will sow about 50 ft. of row; an oz. 250 ft. Sometimes called "yellow turnips."

1191 Burpee's Purple-Top Yellow ☉

90 days. Large, smooth, globe-shaped roots with rich purplish coloring in the upper portion and deep yellow below the soil. Sweet, fine-grained, yellow flesh cooking to bright orange. Burpee's Hardy Garden LILIES

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leafmold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfier ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety—some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. Order 6 bulbs of the same variety at $\frac{1}{2}$ the 12 rate. We do not recommend Hardy Lily bulbs for house culture. How to grow directions are sent with the bulbs.

Burpee's DAHLIA ROOTS

Each year on our Fordhook Farms we try out hundreds of varieties of dahlias and select those that are the best growers, freest bloomers, and which we recommend as the best for you to plant. All are listed here, with some outstanding varieties that we have created. Whether you select the massive Formal or Informal Decorative, the lovely Cactus, Semi-Cactus or the small Pompon varieties, you will be delighted with the results.

F. D. = Formal Decorative; I. D. = Informal Decorative; C = Cactus; S. C. = Semi-Cactus.

Cultural directions are sent with every order for Dahlia roots. We supply **strong root divisions** from field-grown clumps which are guaranteed to produce satisfactory results or your money will be refunded. All roots are sent postpaid. The American Dahlia Society has adopted a classification for all dahlias according to the formation of the flowers. After each name we use initials to denote the class to which that variety belongs.

Burpee's *Floradale Farms* IN CALIFORNIA

Girls harvesting pansy seed on Floradale Farms. Because the plants keep on blooming through a long season, it is necessary for the girls to go over the fields most frequently, often every day, and hand pick the seed pods, otherwise they would shatter and much valuable seed would be lost.

Lemonade, one of the new giant double snapdragons growing for seed on Burpee's Floradale Farms, in the Lompoc Valley, near Santa Barbara, California.

Day after day, in proper season, girls tediously and painstakingly hand pollinate petunia flowers to create the new Multiflora F₁ hybrids, Pink Sensation and Silver Medal. On page 28 we describe these outstanding hybrids and give you some idea as to how this pollination is done. It is necessary for us to hand pollinate each year and for best results in your garden you should get new seed each year. It is amazing to see the hybrid vigor in the plants, the profusion of flowers and the way they are carried well above the foliage of the bushy plants.

Seeds of practically all hardy annuals are sown directly outdoors, after which it is necessary to thin out and transplant. The men here are doing such work in a field of asters at Floradale.

Part of a 40-acre field of the Giant Luther Burbank Zinnias growing for seed. 1949 is the 100th anniversary of Luther Burbank's birth. Be sure to have a planting of these Centennial flowers in your garden. They are delightful.

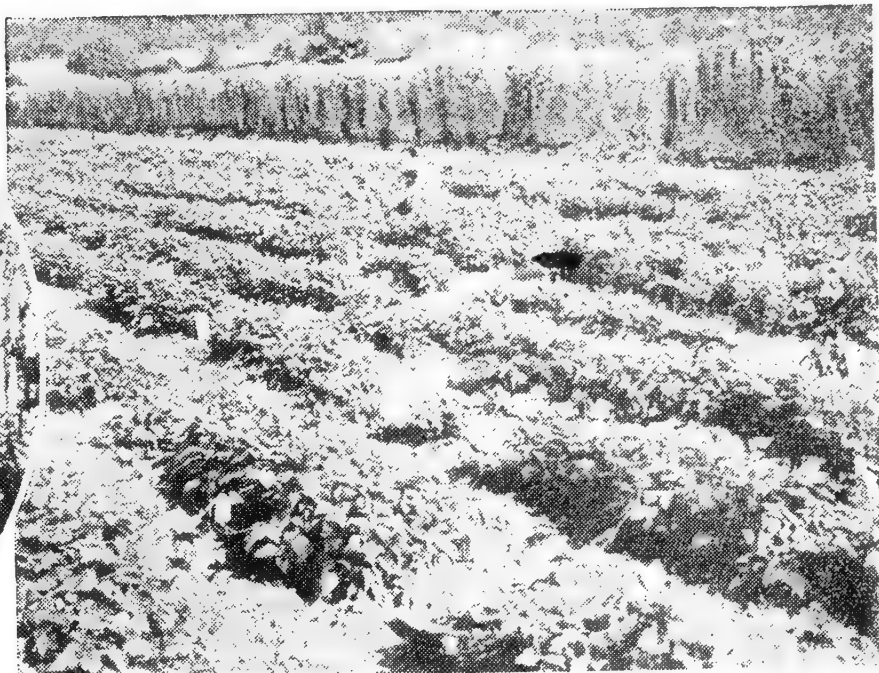

Burpee's

Fordhook Farms

IN PENNSYLVANIA

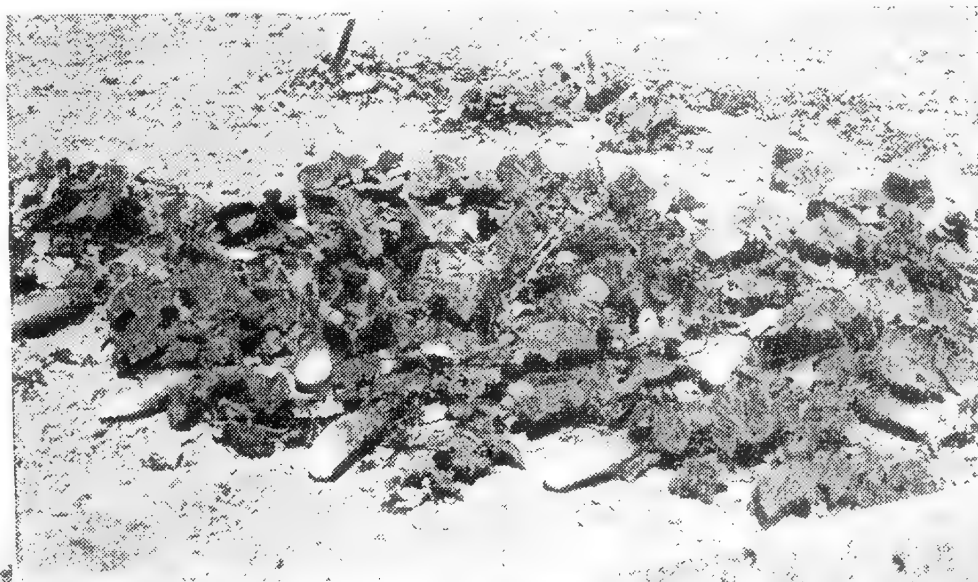

In the Burpee Experiment Grounds, Phil Alampi, WJZ Radio Farm Director, interviews Miss E. H. Lintleman regarding the creation of the new Giant Skyscraper Snapdragons. The methods used to produce new flowers were recorded for the WJZ Farm News Program.

Test plantings of Bush Lima Beans with Pole Limas in the background on Burpee's Fordhook Farms in Pennsylvania. It is for these farms that Burpee's famous Fordhook Bush Lima Bean was named as were such well-known vegetables as Fordhook Celery, Fordhook Famous Cucumber, Fordhook Pickling Cucumber, Fordhook Early Watermelon, Fordhook Wonder Pea, Fordhook Pepper, Fordhook Hybrid Tomato, etc.

Burpee Hybrid Cucumber in the foreground. Due to the hybrid's ability to withstand mosaic and downy mildew, the vines continue to produce their fruits most profusely long after open pollinated varieties have ceased. This picture was taken late in the summer. Note that the vines of a regular variety in the background are nearly dead—Burpee Hybrid keeps on growing and bearing fruits to everyone's astonishment. The extreme vigor and high quality of Burpee Hybrid have made it a most popular, white spine, slicing type cucumber everywhere. See page 77.

A section of the breeding and experiment grounds at Fordhook Farms devoted to petunias. It was here that some of our best varieties were created—the Alldoubles and the new Multiflora F₁ hybrid Silver Medal being introduced this year—the only medal winner in the All-America Trials for 1949.

College girls hand pollinate tomato blossoms at Fordhook to create the four new F₁ hybrids we have introduced in recent years and Burpee's Big Boy, the new Giant Hybrid Tomato being offered for the first time this year. Read about Big Boy on page 101; see color picture on back cover.

BURPEE *Hybrid* VEGETABLES

Burpee Hybrid Vegetables are true first generation (F₁) hybrids—the result of a progressive, painstaking and expensive breeding project by Burpee experts at Fordhook Farms.

Hybrid vigor gives greater yields and better quality.

370 BURPEE HYBRID CUCUMBER

For size, shape, quality, quantity and high resistance to disease, this cucumber is unequalled. Extremely vigorous, long-lived vines produce abundantly after others have ceased.

Pkt. (30 seeds) 30¢;
2 pkts. 55¢;
3 pkts. 75¢;
1½ oz. \$2.75

1132 BURPEE HYBRID TOMATO

The heaviest yielding main-crop tomato, the strong, vigorous plants being loaded with large, meaty, evenly ripened fruits of exceptionally rich flavor.

Pkt. (30 seeds) 35¢;
2 pkts. 65¢;
3 pkts. 90¢;
5 pkts. \$1.45

1133 BURPEEANA EARLY HYBRID TOMATO

A distinctly different, prolific extra-early. At Fordhook, it produced the highest *early* yield of all tomatoes; continues to bear through the season.

Pkt. (30 seeds) 35¢; 2 pkts. 65¢;
3 pkts. 90¢; 5 pkts. \$1.45

BURPEE HYBRID VEGETABLES WERE CREATED ON BURPEE'S FORDHOOK SEED FARMS

A large, dark tomato is the central focus, with its stem and leaves visible. To its left, a woven basket is filled with several similar tomatoes. The background is a light, textured surface.

New for 1949

New Giant Hybrid Tomato
1131 BURPEE'S BIG BOY

Largest fruits of all our hybrids; some weigh 1 lb. and more,—average is about 10 ozs. Perfectly smooth, firm, scarlet-red, thick-walled fruits with meaty flesh of fine flavor and excellent quality. Plants are large, extremely vigorous, with moderately dense foliage that protects the fruits from sun-scald. Valuable for home and market. **Pkt.** (30 seeds) 50¢; **2 pkts.** 95¢; **3 pkts.** \$1.35; **5 pkts.** \$2.20

744 BURPEEANA EARLY DWARF PEA

A really high quality, early dwarf, wrinkled pea for the home garden, market grower, canner and freezer. Pods are dark green, 3 in. and more long and tightly filled with 8 to 10 sweet, tender peas. Vines grow 1½ to 2 ft. tall depending on location, and are exceptionally prolific. In comparison with other varieties of the same class, Burpeeana Early Dwarf is most outstanding for its high production of pods which are ready to pick in about 63 days. Experiment stations, to whom we sent seeds for testing purposes, reported most favorably on it. **Pkt.** 25¢; ½ lb. 55¢; 1 lb. \$1.00; 2 lbs. \$1.90
